

(An Autonomous College under VTU)

Department of Computer Science and Engineering

III to VIII Semesters Scheme and Syllabus

Outcome-based Education and Choice-based Credit System

With effect from AcademicYear2021-22

VISION

Excellence in creating globally competent professionals and moulding them as leaders in Computer Science & Engineering education and research

MISSION

- M1:** Maintaining excellence in Computer Science & Engineering education through academic professionalism, teaching, curricula which reflect the changing needs of the society.
- M2:** Establishing center of excellence by creating knowledge through research and industrial exposure in the area of Computer Science & Engineering.
- M3:** Developing communication skill, leadership qualities, teamwork & skills for continuing education among the students.
- M4:** Inculcating ethics, human values and skills for solving societal problems and environmental protection.
- M5:** Validate engineering knowledge through innovative research projects to enhance their employability and entrepreneurship skills.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

The graduates of Computer Science and Engineering are expected to fulfill the following PEOs after a few years of their graduation.

PEO1: Graduates in Computer Science and Engineering will apply the technical knowledge of analysis and design of software used for sustainable societal growth.

PEO2: Graduates of Computer Science and Engineering will demonstrate logical thinking and programming skills.

PEO3: Graduates in Computer Science and Engineering will demonstrate good communication skills, dynamic leadership qualities with concern for environmental protection.

PEO4: Computer Science and Engineering graduates will be capable of pursuing higher studies, take up research and development work blended with ethics and human values.

PE05: Computer Science and Engineering graduates will have the ability to become entrepreneurs there by switching over from responsive engineer to creative engineer.

PROGRAM OUTCOMES (POs)

Graduates of the Information Science and Engineering Programme will be able to achieve the following POs:

PO1: Engineering Knowledge

Apply the knowledge of mathematics, science, engineering fundamentals, and Information Science and Engineering principles to the solution of complex problems in Information Science and Engineering.

PO2: Problem Analysis

Identify, formulate, research literature, and analyze complex Information Science and Engineering problems reaching substantiated conclusions using first principles of mathematics and engineering sciences.

PO3: Design/Development of Solutions

Design solutions for complex Information Science and Engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of Complex problems

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions related to Information Science and Engineering problems.

PO5: Modern Tool Usage

Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex Information Science and Engineering activities with an understanding of the limitations.

PO6: The Engineer and Society

Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional Information Science and Engineering practice.

PO7: Environment and Sustainability

Understand the impact of the professional **Information Science and Engineering** solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: Ethics

Apply ethical principles and commit to professional ethics and responsibilities and norms of the Information Science and Engineering practice.

PO9: Individual and Team work

NCET Scheme and Syllabus III to VIII Semesters 2019-20

Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communication

Communicate effectively on complex Information Science and Engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project Management and Finance

Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage Information Science and Engineering projects and in multidisciplinary environments.

PO12: Life Long Learning

Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

Program Specific Outcomes (PSOs) are what the graduates of a specific undergraduate engineering program should be able to do at the time of graduation.

PSO1: Professional Skills:

The ability to understand, analyze and develop computer programs in the areas related to system software, multimedia, web design, big data analytics, and networking for efficient design of computer-based systems of varying complexity.

PSO2: Problem-Solving Skills:

The ability to apply standard practices and strategies in software project development using open-ended programming environments to deliver a quality product for business success.

PSO3: Foundation of mathematical concepts:

Ability to apply mathematical concepts to solve real world problems using appropriate data structure and suitable algorithms.

NCET Scheme and Syllabus III to VIII Semesters 2019-20

Third Semester B.E. – Scheme w.e.f. 2019-2020

Sr. No.	Course Code	Course Name	Total Credits	L:T:P:S (Hrs/Week)	Online	Offline	Marks	Weekly load
1	19MAT31	Fourier Series, Transforms and Numerical Techniques	4	3 : 2 : 0 : 0		100%	100	5
2	19CSI32	Data Structures using C(IC)	4	3 : 0 : 2 : 0		100%	100	5
3	19CSI33	Web Programming (IC)	3	3 : 0 : 2 : 0		100%	100	5

FOURIER SERIES, TRANSFORMS AND NUMERICAL TECHNIQUES

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19MAT31	3 : 2 : 0 : 0	4	CIE:50 SEE:50	3 Hours	BS

Course Objectives:

This course will enable students to:

- Have the efficiency in expressing a periodic function in terms of infinite trigonometric series.
- Obtain the knowledge of Laplace Transforms.
- Acquire the skill in solving the engineering applications problem using Laplace Transforms.
- Get the ability to solve the engineering problem using Fourier Transforms.
- Develop the proficiency in solving algebraic and transcendental equations and interpolation using numerical methods

Syllabus

Module – I

Fourier Series: Periodic functions, Dirichlet's conditions, Euler's Formulae (without proof), Fourier series of periodic functions of period $2l$ and 2π , Half range Fourier series, Practical harmonic analysis problems.

08Hours

Module – II

Laplace Transform: Definition, Laplace Transform of elementary functions. Properties, transform of derivatives, multiplication by t^n and division by t - Problems. Laplace transforms of periodic functions, unit step functions and unit impulse function - Problems.

08Hours

Module – III

Inverse Laplace Transforms: Inverse Laplace Transforms of standard functions. (Formulae only). Inverse Laplace transform by using completing the squares, partial fractions, shifting property and differentiation - problems. Convolution theorem - problems. Applications - solution of linear differential equations with initial conditions - problems.

08Hours

Module – IV

Fourier Transforms and Z - Transforms: Complex Fourier transforms, Fourier Sine and Cosine transforms and their inverse transforms - problems. Z-Transforms of some standard functions, Damping and shifting rules - problems. Inverse Z - Transforms by partial fraction method.

08Hours

Module – V

Numerical Methods: Numerical solutions of algebraic and transcendental equations - Regula Falsi Method and Newton Raphson Method (Formulae only) - Problems. Finite Differences - Forward and Backward differences, Newton's Forward and Newton's Backward interpolation formulae. Lagrange's Interpolation formula (without proof) - Problems. Numerical Differentiation using Newton's forward and Backward interpolation formulae. - Problems.

07Hours

Course Outcomes:

On completion of this course, the students are able to:

- C01:** Demonstrate Fourier series to study the behaviour of periodic functions and their applications in engineering problem.
- C02:** Find the Laplace transform of different types of functions.
- C03:** Use the Laplace transform and inverse Laplace Transform in solving various types engineering application problems.
- C04:** Make use of Fourier transform and Z-transform to illustrate discrete/continuous function arising in Engineering applications.
- C05:** Determine the roots of Algebraic and Transcendental equations and Interpolation arising in engineering applications, using numerical methods

DATA STRUCTURES USING C(IC)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI32	3:0:2:0	4	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable the students to:

- Understand the dynamic memory bypointers.
- Understand the difference between structure and self-referentialstructure
- Study linear data structures viz. stack, queue and linkedlist.
- Get knowledge on non-linear data structures viz. BST, AVL andB-Trees.
- Study and choose appropriate data structure to solve problems in realworld

Syllabus

Module – I

Pointers: Introduction, Accessing the variable and its address through the pointer, Declaring & initialization of pointer variables, Array of pointers, Pointer as function arguments, Functions returning pointers, Dynamic memory allocation - Introduction,malloc(),calloc(),realloc().

08 hours

Module –II

Structures: Introduction, defining a structure, declaring structure variables, accessing structure members, Structure initialization, Size of structures, Copying & comparing structure variables, Array of structures,Arrayswithinstrucures,Structureswithinstrucures.Self-referentialstructure.

08 hours

Module –III

Linked Lists: Introduction, Inserting and removing nodes from a list, Lists in C – Arrayimplementation of lists, Circular lists, Doubly linked lists: Inserting and removing nodesfrom alist.

08 hours

Module – IV

Stack: Definition, Stack operations: PUSH, POP, DISPLAY, Array implementation of stacks in C, Linked list implementation of stacks. **Queue:** Queue and its sequential representation, Queue operations: INSERTION, DELETION, DISPLAY, Array implementation of queues in C, Linked listimplementation of queues.

08hours

Module – V

Trees: Introduction, Binary search trees: Insertion and deletion of a node, searching a key element in Binary search tree, Binary tree traversals: preorder, inorder and postorder. Introduction to Balanced trees- AVL, B-Tree, Splay andRed-black.

08hours

Laboratory:

1. Design, develop and execute a program in C based on the following requirements: An EMPLOYEE structure is to contain the following members: Employee_Number (an integer), Employee_Name(astringofcharacters),Basic_Salary(aninteger),All_Allowances(aninteger), IT (an integer), Net_Salary (an integer). Write a functions to read the data of an employee, to calculate

NCET Scheme and Syllabus III to VIII Semesters 2019-20

Net_Salary and to print the values of all the structure members. (All_Allowances = 123% of Basic, Income Tax (IT) = 30% of the gross salary (gross salary = Basic_Salary + All_Allowance), Net_Salary = Basic_Salary + All_Allowances –IT).

2. Design, develop and execute a program in C, to demonstrate Stack data structure using an array. Provide the following operations: a. Push b. Pop c.Display.
3. Design, develop and execute a program in C, to demonstrate Queue data structure using an array. Provide the following operations: a. Insert b. Delete c.Display.
4. Design, develop and execute a program in C to convert a given valid parenthesized infix arithmetic expression to postfix expression and then to print both the expressions. The expression consists of single character operands and the binary operators +, -, * and /.
5. Design, develop and execute a program in C to evaluate a valid postfix expression using Stack. Assume that the postfix expression is read as a single line consisting of non-negative single digit operands & binary arithmetic operators. The arithmetic operators are +, -, * and /.
6. Design, develop and execute a program in C to implement LIST (linked list) with functions to insert an element at the front of the list as well as to delete an element from the front of the list (FIFO), display the contents of the list.
7. Design, develop and execute a program in C to implement LIST (linked list) with functions to insert an element at the front of the list as well as to delete an element from the rear of the list or vice versa (LIFO), display the contents of the list.
8. Design, develop and execute a program in C to implement LIST (linked list) with functions to insert an element at the front/rear end of the list and search & delete a key element of the list, if exists & display the contents of the list.
9. Write a C program to support the following operations on a doubly linked list where each node consists of integers, a. Create a doubly linked list by adding each node at the front. b. Insert a new node to the left of the node whose key value is read as an input. c. Delete the node of a given data, if it is found, otherwise display appropriate message. d. Display the contents of the list.
10. Design, develop and execute a program in C to implement BST that represents a Binary Search Tree, with functions to perform inorder, preorder and postorder traversals & demonstrate the traversals. 1. AVL 2. B-Tree

Course Outcomes

On completion of this course, the students will be able to:

- C01:** Use pointers and heterogeneous datatypes
- C02:** Apply linear data structures for processing of ordered or unordered data.
- C03:** Explore various operations on dynamic data structures
- C04:** Implement the concept of non-linear data structures such as trees.
- C05:** Solve the real-world problems using Data Structures.

WEB PROGRAMMING (IC)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI33	3 : 0 : 2 : 0	4	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to:

- Recollect the evolution of World Wide Web and its relevance to today's technological revolution and also, to comprehend HTML, CSS scripts to design web layouts.
- Acquire Java Script skills for developing client-side web applications.
- Interpret the use of j-Query libraries to simplify complicated JavaScript applications and also, to perform DOM manipulation using j-Query constructs.
- Cognize Bootstrap framework with a focus on creating interactive and responsive web pages faster and easier.
- Assimilate XML fundamentals for developing applications over web.

Syllabus

Module - I

HTML 5 and CSS: Introduction to Hyper Text Markup Language, HTML Elements and Attributes, Headers, Colors, Formatting Elements, Links, Images, Tables, Divs, Lists, Forms, Frames, i-frames, HTML Media. **CSS:** Introduction to CSS, CSS selector, CSS formatting, positioning, layouts, debugging.

08 Hours

Module - II

JavaScript: Introduction, Scripts and HTML Document, JS Output Statements, Variables, Data Types and Conversions, Operators, Expressions, Control Structure, Decisions and Loops, Functions, Document Object Model, Forms and Form Handling Elements, Scripting, Event Handling, Regular Expressions.

08 Hours

Module-III

JQuery: Introduction, Selectors, Events, jQuery DOM Manipulation: jQuery HTML, jQuery CSS, jQuery Event Model, jQuery Effects and Animations, jQuery Plugins.

08 Hours

Module - IV

Bootstrap: Bootstrap Scaffolding, Bootstrap CSS, Bootstrap Layout Components, Bootstrap JavaScript Plugins, Using Bootstrap.

08 Hours

Module - V

XML: Introduction, Syntax, Document Type Definitions, Namespaces, XML Schemas, Displaying Raw XML Documents, Displaying XML Documents with CSS.

08 Hours

Laboratory:

I. HTML and CSS

1. Write a HTML script to display employee details like name, address, mobile number, email id etc similar to a telephone directory.
2. Write a HTML program to display a nested list to list down all the elements serviced by an event management company. The list should be a nested list with main events and subevents.
3. Write a HTML and CSS script to create a webpage with table structure containing alternative backgrounds using class selector functionalities.

NCET Scheme and Syllabus III to VIII Semesters 2019-20

4. Write a HTML and CSS program to design the coverpage which displays the events taking place in and around the state.

II. JavaScript

5. Write a HTML and javascript program to implement a simple banking application. The application should provide features like withdraw, deposit, balance enquiry etc.
6. Write a HTML and javascript program to create a registration page having fields name, username, email Id, password & re-enter password and apply validation using match & equal functions.

III. jQuery

7. Write a HTML and jQuery program to create a webpage to fetch the details of the event and display the invitation.
8. Write a HTML and jQuery program to design a webpage to accept event organizer name from the user and display it on the webpage.

IV. Bootstrap

9. Write a HTML and bootstrap program to display glyphs like envelope, print, search etc. Also, create buttons having glyphs as links to carry out specific tasks.

V. XML

10. Write a XML program to store book details like title, author, publication year, price etc.

Course Outcomes

On completion of this course, the students will be able to:

CO1: Design attractive web layouts using HTML5 and style sheets in a present table form.

CO2: Develop interactive UI for client-side web applications using JavaScript.

CO3: Integrate j-Query libraries to accelerate UI development for client-side web Applications.

CO4: Construct responsive web pages by integrating bootstrap framework.

CO5: Develop applications by using XML to use, store, transmit and display data over web.

PYTHON PROGRAMMING (IC)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI34	3 : 0 : 2 : 0	4	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to

- Master the fundamentals of writing Python programming.
- Study the concepts of Strings and Lists in python.
- Understand the concept of core data structures.
- Acquire the knowledge of Object-Oriented Concepts in python.
- Learn the use of multi-threading and handling Files.

Syllabus

Module – I

Why should you learn Python Programming, Introduction to Python, Python Interpreter and its working, Syntax and Semantics, Variables, Expressions and Statements, Conditional execution, Functions, User Input and Output.

08 hours

Module – II

Iteration, Strings, Arrays, Recursion, Introduction to Lists.

08 hours

Module – III

Lists, Dictionaries, Tuples, Modules, Regular Expressions.

08 hours

Module – IV

Classes and objects, Classes and functions, Classes and methods, Types of methods, Inner class, Inheritance, Constructor, Method Overloading, Method Overriding.

08 hours

Module – V

Exception Handling, Multi-Threading, File handling.

08 hours

Laboratory

- 1) Write a Python program to find GCD of two numbers.
- 2) Write a Python Program to find the square root of a number by Newton's Method.
- 3) Write a Python program to find the exponentiation of a number.
- 4) Write a Python Program to find the maximum from a list of numbers.
- 5) write a Python Program to perform Linear Search.
- 6) write a Python Program to perform Binary Search.
- 7) Write a Python Program to perform selection sort.
- 8) Write a Python Program to perform insertion sort.
- 9) Write a Python Program to perform Merge sort.
- 10) Write a Python program to find first n prime numbers.

NCET Scheme and Syllabus III to VIII Semesters 2019-20

Course Outcomes

On completion of this course, the students will be able to

C01: Use Python syntax and semantics in developing simple programs.

C02: Demonstrate proficiency in handling Strings and Lists.

C03: Implement Python Programs using core data structures like Lists, Dictionaries and use Regular Expressions.

C04: Interpret the concepts of Object-Oriented Programming as used in Python.

C05: Develop exemplary applications using files in Python

ANALOG AND DIGITAL ELECTRONICS

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST35	2:2:0:0	3	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable the students to:

- Understand applications of diode as clippers, Limiters and clampers
- Learn the different types of amplifiers constructed from BJTs and MOSFETs.
- Acquire the knowledge about Boolean laws and theorems.
- Know the working of flip flops and Registers.
- Gain the knowledge of various counters.

Syllabus

Module – I

Diode Circuits: The ideal diode, the second approximation, The third approximation, DC resistance of a diode, Load lines, Clippers and Limiters, Clampers.

BJT Biasing: Fixed Bias, Collector to base Bias, voltage divider bias, Operational Amplifier Application Circuits: Multi-vibrators using IC-555, Peak Detector, Schmitt trigger, Active Filters, Non-Linear Amplifier, Relaxation Oscillator.

08 hours

Module – II

Current-to-Voltage and Voltage-to-Current Converter, Regulated Power Supply Parameters, adjustable voltage regulator, D to A and A to D converter.

MOSFETs: The Depletion-mode MOSFET, D-MOSFET curves, Depletion-mode MOSFET amplifiers, The enhancement-mode MOSFET, CMOS, E-MOSFET amplifiers

08 hours

Module – III

Combinational Logic Circuits: Boolean laws and theorems, Sum-of-Products method, Truth table to Karnaugh map, Pairs Quads, and Octets, Karnaugh simplifications, Don't-care conditions, Product-of-Sums method, Product-of-Sum simplifications, Simplification by Quine-McCluskey method, Introduction to HDL, HDL implementation models.

Data-Processing Circuits: Multiplexers, De-multiplexers, 1-of-16 Decoder, Encoders.

08 hours

Module – IV

Flip-Flops: Gated FLIP-FLOPs, Edge-triggered D FLIP-FLOP, Edge-triggered JK FLIP-FLOP, JK Master-slave FLIP-FLOP, Various representations of FLIP-FLOPs, HDL implementation of FLIP-FLOP

Registers: Types of Registers, Serial In-Serial Out, Serial In-Parallel Out, Parallel In-Parallel Out.

08 hours

Module – V

Registers: Applications of shift registers, Register implementation in HDL.

Counters: Asynchronous counters, Decoding gates, Synchronous counters, changing the counter modulus, Decade counters, counter design as a synthesis problem.

08 hours

Course Outcomes:

NCET Scheme and Syllabus III to VIII Semesters 2019-20

After studying this course, students will be able to

C01: Use of diodes in clippers, limiters and clamping circuits.

C02: Design transistor and MOSFET amplifiers in different configurations.

C03: Apply K-Map and Quine-McCluskey methods to simplify the given Boolean expressions.

C04: Implement the registers using Flip-Flops.

C05: Demonstrate the various counters.

COMPUTER ORGANIZATION & ARCHITECTURE

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST36	2:2:0:0	3	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to:

- Make students understand the basic structure and operation of digital computer.
- Expose the students with different ways of communicating with I/O devices and standard I/O interfaces.
- Learn the hierarchical memory system including cache memories and virtual memory.
- Acquire the knowledge of arithmetic, logic unit and implementation of fixed-point and floating-point arithmetic operations.
- Understand the two types of control unit techniques and the concept of pipelining.

Syllabus

Module – I

Basic Structure of Computers: Basic Operational Concepts, Bus Structures, Performance – Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement.

Machine Instructions and Programs: Memory Location and Addresses, Memory Operations, Instructions and Instruction Sequencing, Addressing Modes, Assembly Language, Basic Input and Output Operations, Stacks and Queues, Subroutines, Additional Instructions, Encoding of Machine Instructions.

08 Hours

Module – II

Input/output Organization: Accessing I/O Devices, Interrupts – Interrupt Hardware, Direct Memory Access, Buses, Interface Circuits, Standard I/O Interfaces – PCI Bus, SCSI Bus, USB.

08 Hours

Module – III

Memory System: Basic Concepts, Semiconductor RAM Memories, Read Only Memories, Speed, Size, and Cost, Cache Memories – Mapping Functions, Replacement Algorithms, and Performance Considerations.

08 Hours

Module – IV

Arithmetic: Numbers, Arithmetic Operations and Characters, Addition and Subtraction of Signed Numbers, Design of Fast Adders, Multiplication of Positive Numbers, Signed Operand Multiplication, Fast Multiplication, Integer Division.

08 Hours

Module – V

Basic Processing Unit: Some Fundamental Concepts, Execution of a Complete Instruction, Multiple Bus Organization, Hard-wired Control, and Micro programmed Control.

Pipelining: Basic concept of pipelining.

08 Hours

Course Outcomes:

NCET Scheme and Syllabus III to VIII Semesters 2019-20

On completion of this course, the students will be able to:

C01: Explain the basic organization of a computer system.

C02: Demonstrate the functioning of different sub systems such as processor, Input/output.

C03: Evaluate performance of memory systems.

C04: Design and analyze simple arithmetic and logical units.

C05: Illustrate hardwired control and micro programmed control, pipelining, embedded and other computing systems.

Text Books:

- 1) Carl Hamacher, Zvonko Vranesic, Safwat Zaky, Computer Organization, 5th Edition, Tata McGraw Hill, 2011. ISBN: 9781259005275 (Listed topics only from Chapters 1, 2, 4, 5, 6, 7, 8, 9 and 12).
- 2) William Stallings: Computer Organization & Architecture, 9th Edition, Pearson, 2015. ISBN-13: 9780132936330

CONSTITUTION OF INDIA, PROFESSIONAL ETHICS & HUMAN RIGHTS

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CPH37	1:0:0:0	1	CIE:50 SEE:50	2 Hours	S&H

COURSE OBJECTIVE:

This course will enable students to:

- Learn about the preamble of the Indian constitution.
- Fundamental rights & duties of a citizen.
- Special privileges of society and economically weaker section of the society.
- Individual role & ethical responsibility towards society.

Syllabus

Module-I

Introduction to constitution: Introduction, making of constitution, Salient features of the constitution, preamble of the Indian constitution. Fundamental rights & limitations.

03 Hours

Module-II

DPSP, Union Executives: Directive principles of state policy, Fundamental duties, union executives- President, Prime minister, Parliament, supreme court of India.

03 Hours

Module-III

State executives, Electoral process, Amendments: State executives- Governor, CM, state legislature, High courts, Electoral process. Amendment Procedures, Amendments - 42nd, 44th, 74th, 76th, 86th and 91st.

02 Hours

Module-IV

Special provisions, Municipalities, co-operative society: Provisions for SC & ST, Women, Children & backward classes. Emergency provisions, Human rights. Municipalities, Panchayats and Co-operative societies.

03 Hours

Module-V

Scope & aim of Engineering ethics: Ethics, Responsibility of engineers, impediments to responsibility, Risks, Safety and Liability of engineers, Honesty, Integrity and reliability in engineering.

02 Hours

Course Outcomes:

On completion of this course, students will be able to:

CO1: Familiarize with fundamental rights and duties.

CO2: Recognize the electoral process.

CO3: Get exposed to legislature and judiciary.

CO4: Realize special provisions given for women, children and weaker section of the society.

CO5: Exhibit engineering ethics and responsibilities of engineers.

Text Book:

ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ
ಕನ್ನಡೇತರರಿಗೆ ಕನ್ನಡ ಕಲಿಸಲು ಗೊತ್ತುಪಡಿಸಿದ ಪಠ್ಯಪುಸ್ತಕ
ಬಳಕೆ ಕನ್ನಡ - baLake Kannada (Kannada for Usage)

(Common to B.Arch, B.Plan and B.E/B.Tech of all branches)

[As per Outcome Based Education (OBE) and Choice Based Credit System (CBCS) scheme]

Course Learning Objectives:

The course will enable the non Kannadiga students to understand, speak, read and write Kannada language and communicate (converse) in Kannada language in their daily life with kannada speakers.

Table of Contents

Introduction to the Book,
 Necessity of learning a local language:
 Tips to learn the language with easy methods.
 Easy learning of a Kannada Language: A few tips
 Hints for correct and polite conversation
 Instructions to Teachers for Listening and Speaking Activities
 Key to Transcription
 Instructions to Teachers

Part – I Lessons to teach and Learn Kannada Language

- Lesson – 1** ವೈಯಕ್ತಿಕ, ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸಾರ್ವಸಾಮಿಕಗಳು ಮತ್ತು ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು - Personal Pronouns, Possessive Forms, Interrogative words
- Lesson – 2** ನಾಮಪದಗಳ ಸಂಬಂಧಾರ್ಥಕ ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು - Possessive forms of nouns, dubitive question and Relative nouns
- Lesson – 3** ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು ವರ್ಣಬಣ್ಣ ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು Qualitative, Quantitative and Colour Adjectives, Numerals
- Lesson – 4** ಕಾಲಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು - ಸಪ್ರಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ - (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case
- Lesson – 5** ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು - Dative Cases, and Numerals
- Lesson – 6** ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು - Ordinal numerals and Plural markers
- Lesson – 7** ಕ್ಷಯ / ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು Defective / Negative Verbs and Colour Adjectives
- Lesson – 8** ಅಪ್ಪಣೆ / ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಆರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು - Permission, Commands, encouraging

ಬಳಕೆ ಕನ್ನಡ

	and Urging words (Imperative words and sentences)
Lesson – 9	ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಬಂಧವರ್ತನೆಯ ಪ್ರಕಾರಗಳು Accusative Cases and Potential Forms used in General Communication
Lesson – 10	“ಇರು ಮತ್ತು ಇರಲ್ಲ” ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾ ಪದಗಳು Helping Verbs “iru and iralla”, Corresponding Future and Negation Verbs
Lesson – 11	ಹೋಲಿಕೆ (ತರತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇಧಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ Comparative, Relationship, Identification and Negation Words
Lesson – 12	ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು Different types of forms of Tense, Time and Verbs
Lesson – 13	ದ್, -ತ್, - ತು, - ಇತು, - ಆಗಿ, - ಅಲ್ಲ, - ಗ್, -ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ Formation of Past, Future and Present Tense Sentences with Verb Forms
Lesson – 14	ಕರ್ನಾಟಕ ರಾಜ್ಯ ಮತ್ತು ರಾಜ್ಯದ ಬಗ್ಗೆ ಕುರಿತಾದ ಇತರೆ ಮಾಹಿತಿಗಳು Karnataka State and General Information about the State
Lesson – 15	ಕನ್ನಡ ಭಾಷೆ ಮತ್ತು ಸಾಹಿತ್ಯ - Kannada Language and Literature
Lesson – 16	ಭಾಷೆ ಕಲಿಯಲು ಏನನ್ನು ಮಾಡಬೇಕು ಮತ್ತು ಮಾಡಬಾರದು Do's and Don'ts in Learning a Language
Lesson – 17	PART - II Kannada Language Script Part – 1
Lesson – 18	PART - III Kannada Vocabulary List : ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು - Kannada Words in Conversation

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ / 1

ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯಪುಸ್ತಕ

(ಕನ್ನಡ ಮಾತೃಭಾಷೆಯ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ)

(ಕನ್ನಡಿಗರಿಗಾಗಿ - for Kannadigas - Common to all branches)

[As per Outcome Based Education (OBE) and Choice Based Credit System (CBCS) scheme]

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

- ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡದ ಮೊತ್ತಿಗೆ ಕ್ರಿಯಾತ್ಮಕ ಕನ್ನಡವನ್ನು, ಕನ್ನಡ ಸಾಹಿತ್ಯ, ಸಂಸ್ಕೃತಿ ಮತ್ತು ನಾಡು ನುಡಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.
- ಕನ್ನಡದಲ್ಲಿ ತಾಂತ್ರಿಕ ವಿಜ್ಞಾನಗಳ ವಿಷಯಕ್ಕೆ ಸಂಬಂಧಿಸಿದ ಹಲವಾರು ವಿಷಯಗಳನ್ನು ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.
- ಕನ್ನಡ ಭಾಷಾಭಾಷ್ಯ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

ಪರಿವಿಡಿ

ಭಾಗ - ಒಂದು ಲೇಖನಗಳು

ಕನ್ನಡ ನಾಡು, ನುಡಿ ಮತ್ತು ಸಂಸ್ಕೃತಿಗೆ ಸಂಬಂಧಿಸಿದ ಲೇಖನಗಳು

೧. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ : ಹಂಪಿ ನಾಗರಾಜಯ್ಯ
೨. ಕರ್ನಾಟಕದ ವಿಕೀಕರಣ : ಒಂದು ಅಪೂರ್ವ ಚರಿತ್ರೆ - ಡಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ
೩. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ - ಡಾ. ಎಲ್. ಶಿವರಾಜ್ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ *

ಭಾಗ - ಎರಡು

ಕಾವ್ಯ ಭಾಗ (ಆಧುನಿಕ ಪೂರ್ವ)

೪. ವಚನಗಳು : ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಬ್ಬಮಪ್ಪಯ್ಯ, ಅಯ್ಯಕ್ಕಿ ಮಾರಯ್ಯ
ಜೀಡರ ದಾಸಿಮಯ್ಯ, ಅಯ್ಯಕ್ಕಿ ಅಕ್ಕಮಯ್ಯ.
೫. ಕೀರ್ತನೆಗಳು : ಅದರಿದೇವನು ಫಲ ಇದರಿದೇವನು ಫಲ - ಪುರಂದರದಾಸ
ತಲ್ಲೂಕೆಗದಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೆ - ಕನಕದಾಸ
೬. ತತ್ವಪದಗಳು : ಸಾವಿರ ಕೊಡಗಳ ಸುಟ್ಟು - ಶಿಶುನಾಳ ಚರೀಫ
ಶಿವಯೋಗಿ - ಬಾಲಲೀಲಾ ಮಹಾಂತ ಶಿವಯೋಗಿ
೭. ಜನಪದ ಗೀತೆ : ಬೀಗುವ ಪದ, ಬಡವರಿಗೆ ಸಾವ ಕೊಡಬೇಡ

ಭಾಗ - ಮೂರು

ಕಾವ್ಯ ಭಾಗ (ಆಧುನಿಕ)

೮. ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗ : ಡಿ.ಎ.ಜಿ.

೯. ಕುರುಡು ಕಾಂಚಾಣಾ : ದ.ರಾ. ಬೇಂದ್ರೆ
 ೧೦. ಹೊಸಬಾಳಿನ ಗೀತೆ : ಕುವೆಂಪು
 ೧೧. ಹೆಂಡತಿಯ ಕಾಗದ : ಕೆ.ಎಸ್. ನರಸಿಂಹಸ್ವಾಮಿ
 ೧೨. ಮದ್ದಿನಿಂದ ಮದ್ದಿಗೆ : ಬಿ.ಎಸ್. ಶಿವರುದ್ರಪ್ಪ
 ೧೩. ಆ ಮರ ಈ ಮರ : ಚಂದ್ರಶೇಖರ ಕಂಬಾರ
 ೧೪. ಬೋಮನ ಮಕ್ಕಳ ಹಾಡು : ಸಿದ್ಧಲಿಂಗಯ್ಯ

ಭಾಗ - ನಾಲ್ಕು

ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿ ಪರಿಚಯ, ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ

೧೫. ಡಾ. ಸರ್ ಎಂ ವಿಶ್ವೇಶ್ವರಯ್ಯ - ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ : ಎ ಎನ್ ಮೂರ್ತಿರಾವ್
 ೧೬. ಯುಗಾದಿ : ಮಹದೇಂದ್ರ
 ೧೭. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ : ಹಿ.ಬಿ. ಬೋರಲಿಂಗಯ್ಯ

ಭಾಗ - ಐದು

ವಿಜ್ಞಾನ ಮತ್ತು ತಂತ್ರಜ್ಞಾನ

೧೮. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ
 ೧೯. 'ಕ' ಮತ್ತು 'ಬ' ಬರಹ ತಂತ್ರಾಂಶಗಳು ಮತ್ತು ಕನ್ನಡದ ಟೈಪಿಂಗ್*
 ೨೦. ಕನ್ನಡ - ಕಂಪ್ಯೂಟರ್ ಶಬ್ದಕೋಶ*
 ೨೧. ತಾಂತ್ರಿಕ ಪದಕೋಶ : ತಾಂತ್ರಿಕ ಹಾಗೂ ಪಾರಿಭಾಷಿಕ ಕನ್ನಡ ಪದಗಳು*
 * (ಅಧ್ಯಾಯ 3, 19, 20 ಮತ್ತು 21 ಇವುಗಳು ವಿಶೇಷ ಯಾದಿಂದ ಪ್ರಕಟಿತ " ಆದಳಿತ ಕನ್ನಡ " ಪುಸ್ತಕದಿಂದ ಆಯ್ದ ಲೇಖನಗಳು - ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ.

ELEMENTS OF COMMUNICATION

Course Code	L : T : P : S	Credits	Exam Marks	Exam Duration	Course Type
20PEC39	1 : 0 : 2 : 0	1	CIE:50 SEE:50	3 Hours	PT

Course Objectives:

This course will enable students to:

- Implement English vocabulary at command and ensure language proficiency.
- Pronunciation skills to enhance with English vocabulary and language proficiency Language Lab.
- Augment LSRW and GV skills (Listening, Speaking, Reading, Writing and Grammar, Vocabulary) through tests, activities, exercises etc., comprehensive web-based learning and assessment systems can be referred
- Achieve better technical writing and Presentation skills Identify the common errors in speaking and writing English and acquire Employment and Workplace communication skills.
- Define non-verbal communication

Syllabus

Module – I

Introduction to Communication Skills: What is communication? The importance of communication skills in Engineering, Key concepts in communication, Kinds of communication, The communication process, Barriers & filters in communication, Feedback in communication, Traits of a good and poor communicator, The communication pie.

03 Hours

Module – II

Listening Skills– Its importance, Difference between hearing & listening, Active Listening, Traits of good listeners, The Listening Cycle, Listening for Pronunciation Practice.

03 Hours

Reading Skills: Importance of Reading Skills in Communication, building confidence in reading, countering common errors in reading, Reading rate & reading comprehension, Jigsaw reading.

06 Hours

Module – III

Speaking skills: Importance of Speaking, Purpose of Speaking, Secrets to Speaking, Importance of Pronunciation in speaking, Improving pronunciation through cluster, Sounds, Pronunciation clarity & Cluster sounds, JAM Sessions, Pick and Speak.

06 Hours

Module – IV

Writing skills: Importance of Written Communication, The importance of good sentence and paragraph construction, Hallmarks of good writing, Accuracy, Ambiguity & Brevity in written communication, One word for many, 7 C's of written communication, Proofing your document, Activities on Written Communication.

Body Language: Importance of Body Language, Body Language Do's & Don'ts, Body Language speaks volumes – the fine print, Body Language behaviour & their Interpretation.

06 Hours

Module – V

Presentation Skills: How to be an effective presenter, establishing specific purpose and desired outcomes of a presentation, Organizing, writing and editing content in a presentation, Preparation of effective visuals to guide and support a presentation, Effective use of verbal and non-verbal presentation techniques.

Group presentations: Group presentations by the participants, Presentations would be followed by question & answer sessions, Extensive feedback would be given by the trainer on the strengths & areas of improvement, Action plan for improvement for each individual student.

05 Hours

Course Outcomes:

On completion of this course, the students will be able to:

CO1:Students will develop knowledge, skills, and judgment around human communication that facilitate their ability to work collaboratively with others.

CO2:Such skills could include communication competencies such as managing conflict, understanding small group processes, active listening, appropriate self-disclosure, etc.

Text & References:

- 1) MadhulikaJha, Echoes, Orient Long Man
- 2) Ramon & Prakash, Business Communication, Oxford.
- 3) Sydney Greenbaum Oxford English Grammar, Oxford.

4th Semest er

APPLIED CALCULUS AND PROBABILITY DISTRIBUTIONS

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19MAT41	3:2:0:0	4	CIE:50 SEE:50	3 Hours	BS

Course Objectives:

This course will enable students to:

- Acquire the knowledge of calculus of complex functions.
- Develop the proficiency in solving Numerical integral and Initial value problems.
- Obtain the knowledge of probability distributions.
- Learn concept of the Joint distributions and Markov's chains. Known the importance of statistical inference in engineering.

Syllabus

Module – I

Complex Variables: Functions of a complex variable, derivative of complex functions. Analytic functions, (No problems by using limits). Cauchy's-Riemann equations in Cartesian and polar forms, Harmonic functions – problems (No problems by using limits). Construction of analytic functions by using Milne-Thomson method – problems.

Complex integration: Line integrals - problems. Cauchy Theorem (no problems on verification of the theorem) and Cauchy's integral formula - problems.

08 Hours

Module – II

Numerical Methods: Numerical Integration - Trapezoidal rule, Simpson's 1/3rd and 3/8th rule. Numerical solutions of ordinary differential equations of first order and first degree - Picard's method, Taylor's Series method, Modified Euler's Method, Runge-Kutta Method of 4th order and Milne's Predictor-Corrector Method (without proof) – Problems.

08 Hours

Module – III

Random Variables and Probability Distribution: Discrete and continuous Random Variables, Probability density function and distributions. Binomial, Poisson, Exponential and Normal distributions.

08 Hours

Module – IV

Joint Probability and Markov's Chain: Joint Probability distribution of two discrete random variables. Expectations, correlation and covariation. Probability vectors, stochastic matrices, fixed point matrices, regular stochastic matrices, Markov's Chains, higher transition probabilities, stationary distribution of regular Markov's Chains.

08 Hours

Module – V

Sampling and inference: Sampling Distribution, Testing of hypothesis, level of significance, confidence

limits, test of significance of large samples, sampling of variables, central limit theorem, confidence limits for unknown means, Student's t-distribution and Chi-square test.

Course Outcomes:

On completion of this course, the students are able to:

- CO1:** Use the concepts of analytical functions and complex integration in engineering application problems.
- CO2:** Solve the Numerical integral and initial value problems arising in engineering applications, using numerical methods.
- CO3:** Apply probability distributions in analysing the probability models arising in engineering field.
- CO4:** Apply joint probability distributions and Markov's chains in analysing the probability models arising in engineering field.
- CO5:** Use the concept of sampling analysis in analysing the statistical models arising in engineering field

DESIGN AND ANALYSIS OF ALGORITHMS (IC)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI42	3 :0: 2 :0	4	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable the students to:

- Assess how the choice of algorithm design methods impacts the performance of programs.
- Solve problems using Divide and Conquer methods and writing programs for these solutions.
- Solve problems using algorithm design methods such as the greedy method.
- Choose the appropriate algorithm design method to find the shortest path for a specified application.
- Solve problems using algorithm design methods such as the, pattern matching, backtracking.

Syllabus

Module – I

Introduction Algorithms: Performance analysis, space and time complexity, Growth of function - big Oh, Omega, Theta notation, Mathematical background for algorithm analysis, Analysis of selection sort, insertion sort, Randomized algorithms, Recursive algorithms, The substitution method, Recursion tree method, Master method.

08 hours

Module – II

Divide and Conquer: General method, Binary search, Finding minimum and maximum, Merge sort analysis, Quick sort analysis, Strassen's matrix multiplication, The problem of multiplying long integers.

Decrease and conquer approaches: Introduction, Insertion Sort, Depth First Search and Breadth First Search.

08 hours

Module – III

General Method: Knapsack problem, Job sequencing with deadlines, Minimum cost spanning trees- Kruskal and prim's algorithm, Optimal storage on tapes, Single source shortest path.

Transfer and conquer: Introduction, Balanced search trees, Heap and Heap sort

08 hours

Module – IV

General Method: Multistage graphs, all pair shortest path, single source shortest path, 0/1 knapsack, Travelling salesman problem, Flow shop scheduling.

08 hours

Module – V

General Method: 8 queen problem (N-queen problem), Sum of subsets, Graph coloring.

String Matching Algorithms: The naive string-matching Algorithms, The Rabin Karp algorithm, String matching with finite automata, the knuth-Morris-Pratt algorithm, longest common subsequence algorithm

08 hours

Laboratory:

NCET Scheme and Syllabus III to VIII Semesters 2019-20

- 1) Write a C/C++ program to sort the elements by using quicksort method.
- 2) Write a C/C++ program to sort the elements by using merge sort method.
- 3) Obtain the Topological ordering of vertices in a given digraph.
- 4)

From a given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm.

- 5) Implement 0/1 Knapsack problem using Dynamic Programming.
- 6) Find Minimum Cost Spanning Tree of a given undirected graph using Kruskal's algorithm.
- 7) Find Minimum Cost Spanning Tree of a given undirected graph using Prim's algorithm.
- 8) a. Compute the transitive closure of a given directed graph using Warshall's algorithm.
b. Implement All-Pairs Shortest Paths Problem using Floyd's algorithm.
- 9) a. Print all the nodes reachable from a given starting node in a digraph using BFS method.
b. Check whether a given graph is connected or not using DFS method.
- 10) Implement N Queen's problem using Back Tracking.

Course Outcomes

On completion of this course, the students will be able to:

- C01:** Understand the concept of pseudocode for writing an algorithm and acquire ability to analyze the asymptotic performance of various algorithms
- C02:** Explore the concept of divide and conquer and graphs and get familiarity of analysis of various graph algorithms.
- C03:** Understand algorithm designing techniques such as Greedy approach and explore various related application problems.
- C04:** Use different algorithms to solve dynamic programming problems.
- C05:** Apply the pattern matching techniques in the real-world problems.

OBJECT ORIENTED PROGRAMMING WITH JAVA(IC)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI43	3 :0: 2 :0	4	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to:

- Learn the basic concepts of object-oriented programming.
- Understand the basics of JAVA Programming using classes and objects.
- Gain the knowledge of Inheritance and packages.
- Expose to the concepts of exceptions that occur while programming in JAVA.
- Acquire the knowledge of multi-threaded programming in JAVA.

Syllabus

Module – I

Introduction to Object Oriented Concepts: Procedure–Oriented Programming system, Object Oriented Programming System, Comparison of Object-Oriented Language with C.

Introduction to Java: Java's magic, The Byte code, Java Development Kit (JDK), Java Buzzwords, Object- oriented programming, IO Streams, Data types, variables and arrays, reference variables, Operators, Control Statements. Simple Java programs.

08Hours

Module – II

Classes: Classes fundamentals, Declaring objects, this keyword, garbage collection.

Methods: Method Prototyping, Member functions and data members, Constructors, Objects and methods, Method Overloading, Objects and arrays, Access modifiers, Setters and getters, Nested classes, Console I/O.

08 Hours

Module – III

Inheritance: Inheritance basics, using super, creating multi-level hierarchy, method overriding, using Abstract classes, using final. **Packages:** Packages: Access Protection, Importing Packages.

08Hours

Module – IV

Interfaces, Exceptions, Applets: Interfaces, Exception handling fundamentals, exception types, uncaught exceptions, using try and catch, using multiple catch clauses, nested try statements, throw, throws, finally, Exception handling in Java, Applets, Types of Applets, Applet basics and class, Applet Architecture.

08Hours

Module – V

Event Handling and Multi-Threaded Programming: Two event handling mechanisms, the delegation event model, Event classes, Sources of events, Event listener interfaces, Using the delegation event model, Adapter classes, Inner classes. Multi-Threaded Programming: What are threads? How to make the classes threadable, Extending threads, Implementing runnable, Synchronization, Changing state of the thread, Bounded buffer problems, read-write problem.

08Hours

Laboratory

- 1) Write a Java program that prompts the user for an integer and then prints out all prime numbers up to that integer.
- 2) Write a Java program that prints the following pattern type

**
*
- 3) Write a java program to calculate gross salary & net salary taking the following data. Input: empno, empname, basic Process: DA=50% of basic HRA=25% of basic CCA=Rs240/-
PF=10% of basic PT=Rs100/-
- 5) Write a Java program that displays area of different Figures (Rectangle, Square, Triangle) using the method overloading.
- 6) Write a Java program that displays the time in different formats in the form of HH, MM, SS using constructor Overloading.
- 7) Write a Java program that counts the number of objects created by using static variable.
- 8) Write a java program that implements educational hierarchy using inheritance.
- 9) Write a java program that implements Array Index out of bound Exception using built-in Exception.
- 10) Write a java program that implements bank transactions using user-defined exception.
- 11) Write a java program to identify the significance of finally block in handling exception.

Course Outcomes

On completion of this course, the students will be able to:

CO1: Explain the difference between Procedure and Object-Oriented Programming.

CO2: Develop basic JAVA programs.

CO3: Apply Inheritance properties and packages in solving real world problems.

CO4: Use exception handling methods efficiently.

CO5: Demonstrate the programs by using multithreaded concepts.

Text Books:

DATABASE CONCEPTS THROUGH MYSQL (IC)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI44	2:0:2:0	3	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to:

- Understand the basic concepts of database and Database Management System and difference between relational systems and non-relational systems.
- Gets a clear understanding of how to create and maintain data in a relational database using SQL.
- Understand the working of advanced queries in SQL.
- Understand how data can be manipulated using indexing.
- Gets a clear understanding of how to design and develop applications using JDBC and SQL.

Syllabus

Module – I

Introduction to Database: Introduction, Characteristics of database approach, Advantages of using the DBMS approach. Database System concepts and architecture: Data Models, Schemas, and Instances, Three schema architecture and Data independence. Data Modeling using Entities and Relationships Model: Entity types, Entity sets, attributes and keys, relationship, constraints, ER diagrams.

08 Hours

Module – II

Relational Model: Relational Model Concepts, Relational Model Constraints and relational database schemas. **SQL:** SQL data definition and data types, specifying constraints in SQL, schema change statements in SQL, INSERT, DELETE, and UPDATE statements in SQL, assertions, views, queries.

08 Hours

Module – III

More complex SQL retrieval queries: Nested queries, correlated nested queries, The EXISTS and UNIQUE function in SQL, Joins, Aggregate functions in SQL, Grouping: Group by and having clauses.

08 hours

Module – IV

Index Structure: Index Structures, Indexes on Sequential Files-Secondary Indexes-B-Trees-Hash Tables-Bitmap Indexes.

08 hours

Module – V

Project Work: To design and implement current trends and new challenges of database applications using the concepts of database management systems with special emphasis on JDBC and MySQL database.

08 hours

Laboratory

NCET Scheme and Syllabus III to VIII Semesters 2019-20

Programs covering SQL, Constraints, Operators and Functions, Nested queries and Joins etc.
Project Work.

Course Outcomes

On completion of this course, the students will be able to:

- C01:** Describe the basic concepts of database and Database Management System; enforce integrity constraints on a database using RDBMS.
- C02:** Implement Structured Query Language (SQL) queries for database manipulation.
- C03:** Create complex sql queries and use them for database manipulation.
- C04:** Apply indexing structures for file handling.
- C05:** Design database systems for current trend applications to interact with databases using JDBC and database to save and retrieve data in a safe and consistent manner.

Text Books:

OPERATING SYSTEMS

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST45	2:2:0:0	3	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to:

- Learn the basic concepts of operating system, services and process handling.
- Impart adequate knowledge on the need of parallel programming using multi-threading concepts.
- Identify and handling deadlocks.
- Enable effective usage of the memory management techniques.
- Know about various file systems and understand the working of Linux platform.

Syllabus

Module – I

Introduction to Operating Systems, System Structures: What operating systems do; Computer System organization; Computer System architecture; Operating System structure; Operating System operations; Process management; Memory management; Storage management; Protection and Security; Distributed system; Special- purpose systems; Computing environments.

Operating System Services: User - Operating System interface; System calls; Types of system calls; System programs; Operating system design and implementation; Operating System structure; Virtual machines; Operating System generation; System boot.

08Hours

Module – II

Process Management: Process concept; Process scheduling; Operations on processes; Inter process communication.

Multi-threaded Programming: Overview; Multithreading models; Thread Libraries; Threading issues. **Process Scheduling:** Basic concepts; Scheduling Criteria; Scheduling Algorithms; Multiple-processor scheduling; thread scheduling.

Process Synchronization: Synchronization: The critical section problem; Peterson's solution; Synchronization hardware; Semaphores; Classical problems of synchronization; Monitors.

08Hours

Module – III

Deadlocks: Deadlocks; System model; Deadlock characterization; Methods for handling deadlocks; Deadlock prevention; Deadlock avoidance; Deadlock detection and recovery from deadlock.

08Hours

Module – IV

Memory Management: Memory management strategies: Background; Swapping; Contiguous memory allocation; Paging; Structure of page table; Segmentation.

Virtual Memory Management: Background; Demand paging; Copy-on-write; Page replacement; Allocation of frames; Thrashing.

08Hours

Module – V

File System, Implementation of File System: File system: File concept; Access methods; Directory structure; File system mounting; File sharing; Protection: Implementing File system: File system structure; File system implementation; Directory implementation; Allocation methods; Free space

NCET Scheme and Syllabus III to VIII Semesters 2019-20

management.**Case Study:** The Linux Operating System: Linux history; Design principles; Kernel modules; Process management; Scheduling; Memory Management; File systems, Input and output; Inter-process communication.

08Hours

Course Outcomes:

On completion of this course, the students will be able to:

C01:Demonstrate functional architecture of an operatingsystem.

C02:Describe process scheduling, multithreading and synchronizationConcepts.

C03:Use suitable techniques for handlingthe deadlocks.

C04:Apply various memory managementtechniques.

C05:Realize the different concepts of OS in platform of usage through casestudies

Text Books:

- 1) Abraham Silberschatz, Peter Baer Galvin, Greg Gagne, "Operating System Concepts" 9th edition, Wiley-India, 2016. ISBN-13: 978-8126554270.

INTRODUCTION TO MICROPROCESSORS & MICROCONTROLLERS

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST46	2:2:0:0	3	CIE:100 SEE:100	3 hours	PCC

Course Objectives:

This course will enable students to:

- Understand differences between Microprocessors and Microcontrollers.
- Analyze the properties of Microprocessors and Microcontrollers
- Apply the knowledge of data transfer information through serial and parallel ports.
- Create real world applications using assembly language.
- Analyze their practical knowledge through experiments

Syllabus

Module-I

Introduction to Microprocessor: The x86 microprocessor: Brief history of the x86 family, Inside the 8088/86, Introduction to assembly programming, Introduction to Program Segments, The Stack, Flag register, x86 Addressing Modes. Assembly language programming: Directives & a Sample Program, Assemble, Link & Run a program, More Sample programs, Control Transfer Instructions, Data Types and Data Definition, Full Segment Definition, Flowcharts and Pseudocode.

08 Hours

Module-II

Instruction Set: Instructions sets description, Arithmetic and logic instructions and programs: Unsigned Addition and Subtraction, Unsigned Multiplication and Division, Logic Instructions, BCD and ASCII conversion, Rotate Instructions. INT 21H and INT 10H Programming: Bios INT 10H Programming, DOS Interrupt 21H. 8088/86 Interrupts, x86 PC and Interrupt Assignment.

08 Hours

Module-III

Assembly Language Programming: Introduction to 8051 and instruction set, addressing modes, data transfer instructions, example programs, arithmetic instruction, logical instructions, jump and call subroutines, example programs.

08 Hours

Module-IV

ARM Embedded Systems: Microprocessors versus Microcontrollers, ARM Embedded Systems: The RISC design philosophy, The ARM Design Philosophy, Embedded System Hardware, Embedded System Software, ARM Processor Fundamentals: Registers, Current Program Status Register, Pipeline, Exceptions, Interrupts, and the Vector Table.

08 Hours

Module-V

Introduction to the ARM Instruction Set: Introduction to the ARM Instruction Set: Data Processing Instructions, Branch Instructions, Software Interrupt Instructions, Program Status Register Instructions, Coprocessor Instructions, Loading Constants, Simple programming.

08 Hours

Course Outcomes:

NCET Scheme and Syllabus III to VIII Semesters 2019-20

On completion of this course, the students are able to:

C01: Describe the Intel 8085/8086 architecture with explanation of internal organization of some popular microprocessors/microcontrollers.

C02: Construction of a maintainable assembly language program for an algorithm.

C03: Conclude the Intel 8085/8086 real mode memory addressing.

C04: Describe the functioning of peripheral ICs.

C05: Designing of microprocessor and microcontroller-based system.

Text Books:

- 1) Muhammad Ali Mazidi, "The 8051 Microcontroller; A Systems approach", Pearson Education 2013, ISBN 129207266, Chapters 1,2,3,5,7,8.
- 2) Kenneth J. "The 8051 Microcontroller architecture; Programming and applications", ISBN 0314772782.

Reference Books:

- 1) Predko, "Programming and Customizing the 8051 microcontrollers, ISBN:8131706974
- 2) Raj Kamal, Microcontrollers, architecture, programming, interfacing and system design, Pearson, education, 2005, ISBN:9788131706978.

UNIVERSAL HUMAN VALUES 2: UNDERSTANDING HARMONY

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19UHV47	2-1-0-3	3	100	3 Hours	S&H

Human Values Courses

This course also discusses their role in their family. It, very briefly, touches issues related to their role in the society and the nature, which needs to be discussed at length in one more semester for which the foundation course named as “H-102 Universal Human Values 2: Understanding Harmony” is designed which may be covered in their III or IV semester. During the Induction Program, students would get an initial exposure to human values through Universal Human Values – I. This exposure is to be augmented by this compulsory full semester foundation course.

Pre-requisites: Universal Human Values 1 (desirable)

Course Objectives: The objective of the course is fourfold:

- Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
- Understanding (or developing clarity) of the harmony in the human being, family, society and nature/existence
- Strengthening of self-reflection.
- Development of commitment and courage to act.

Course Topics: The course has 28 lectures and 14 practice sessions in 5 modules:

Module – I

Course Introduction - Need, Basic Guidelines, Content and Process for Value Education

Purpose and motivation for the course, recapitulation from Universal Human Values-I Self-Exploration- what is it? - Its content and process; Natural Acceptance and Experiential Validation- as the process for self-exploration Continuous Happiness and Prosperity- A look at basic Human Aspirations Right understanding, Relationship and Physical Facility- the basic requirements for fulfillment of aspirations of every human being with their correct priority Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario Method to fulfill the above human aspirations: understanding and living in harmony at various levels. Include practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking- disliking.

Module – II

Understanding Harmony in the Human Being - Harmony in Myself!

Understanding human being as a co-existence of the sentient “I” and the material “Body” Understanding the needs of Self (“I”) and “Body”-happiness and physical facility Understanding the Body as an instrument of “I” (I being the doer, seer and enjoyer) Understanding the characteristics and activities of “I” and harmony in “I”. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail Programs to ensure Sanyam and Health. Include practice sessions to discuss the role others have played in making material goods available to me. Identifying from one’s own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease

Module – III

Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship

Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfillment to ensure mutual happiness; Trust and Respect as the foundational values of relationship. Understanding the meaning of Trust; Difference between intention and competence. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship. Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family. Include practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives.

Module – IV

Understanding Harmony in the Nature and Existence - Whole existence as Coexistence

Understanding the harmony in the Nature. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence. Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

Module – V

Implications of the above Holistic Understanding of Harmony on Professional Ethics

Natural acceptance of human values. Definitiveness of Ethical Human Conduct Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of people friendly and eco- friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems. Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations. Sum up. Include practice Exercises and Case Studies will be taken up in Practice (tutorial) Session seg. to discuss the conduct as an engineer or scientist etc.

Text Books:

- 1) Human Values and Professional Ethics by RRGaur, RSangal, GPBagaria, Excel Books, New Delhi, 2010

Reference Books-3.2

- 1) Jeevan Vidya: Ek Parichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak, 1999.
- 2) Human Values, A.N. Tripathi, New Age Intl. Publishers, New Delhi, 2004.
- 3) The Story of Stuff (Book). The Story of My Experiments with Truth-by Mohandas Karamchand.

NCET Scheme and Syllabus III to VIII Semesters 2019-20

- 4) Gandhi Small is Beautiful - E. F. Schumacher.
- 5) Slow is Beautiful - Cecile Andrews
- 6) Economy of Permanence - J. C. Kumarappa
- 7) Bharat Mein Angreji Raj - Pandit Sunderlal
- 8) Rediscovering India - by Dharampal
- 9) Hind Swaraj or Indian Home Rule - by Mohandas K. Gandhi
- 10) India Wins Freedom - Maulana Abdul Kalam Azad
- 11) Vivekananda - Romain Rolland (English)
- 12) Gandhi - Romain Rolland (English)

Mode Of Conduct (L-T-P-C 2-1-0-3 or 2L:1T:0P 3 credits)

Lecture hours are to be used for interactive discussion, placing the proposals about the topics at hand and motivating students to reflect, explore and verify them. Tutorial hours are to be used for practice sessions. While analyzing and discussing the topic, the faculty mentor's role is in pointing to essential elements to help in sorting them out from the surface elements. In other words, help the students explore the important or critical elements. In the discussions, particularly during practice sessions (tutorials), the mentor encourages the student to connect with one's own self and do self-observation, self-reflection and self-exploration. Scenarios may be used to initiate discussion. The student is encouraged to take up "ordinary" situations rather than "extra-ordinary" situations. Such observations and their analyses are shared and discussed with other students and faculty mentor, in a group sitting. Tutorials (experiments or practical) are important for the course. The difference is that the laboratory is everyday life, and practical are how you behave and work in real life. Depending on the nature of topics, worksheets, home assignment and/or activity are included. The practice sessions (tutorials) would also provide support to a student in performing actions commensurate to his/her beliefs. It is intended that this would lead to development of commitment, namely behaving and working based on basic human values. It is recommended that this content be placed before the student as it is, in the form of a basic foundation course, without including anything else or excluding any part of this content. Additional content may be offered in separate, higher courses. This course is to be taught by faculty from every teaching department, including HSS faculty. Teacher preparation with a minimum exposure to at least one 8-day FDP on Universal Human Values is deemed essential.

Assessment: This is a compulsory credit course. The assessment is to provide a fair state of development of the student, so participation in classroom discussions, self-assessment, peer assessment etc. will be used in evaluation.

Example: Assessment by faculty mentor: 10 marks Self-assessment: 10 marks Assessment by peers: 10 marks Socially relevant project/Group Activities/Assignments: 20 marks.

Semester End Examination: 50 marks

The overall pass percentage is 40%. In case the student fails, he/she must repeat the course.

Outcome of the Course:

By the end of the course, students are expected to become more aware of themselves, and their surroundings (family, society, nature); they would become more responsible in life, and in handling problems with sustainable solutions, while keeping human relationships and human nature in mind. They would have better critical ability. They would also become sensitive to their commitment towards what they have understood (human values, human relationship and human society). It is hoped that they would be able to apply what they have learnt to their own self in different day-to-

NCET Scheme and Syllabus III to VIII Semesters 2019-20

daysettings in real life, at least a beginning would be made in this direction. This is only an introductory foundational input. It would be desirable to follow it up by a) faculty-student or mentor-mentee programs throughout their time with the institution b) Higher level courses on human values in every aspect of living. E.g. as a professional.

PROFESSIONAL DEVELOPMENT OF ENGINEERS

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSH48	1:0:2:0	2	CIE:50 SEE:50	3 Hours	PT

Course Objectives:

This course will enable students to:

- Explain instances when sending email is necessary and appropriate.
- Create an email subject line that accurately describes the content of the message.
- Clarify and prioritize one's objectives and goals, by creating more planning time.
- Set and accomplish goals by self-reflection and self-monitoring
- Identify, prevent, and manage stress to improve academic success.
- Distinguishing between management and leadership and sharpening interpersonal and communication Skills.

Syllabus

Module – I

Team Building: Defining team and its important elements, Clarifying the advantages and challenges of team work, Understanding bargains in team building, Defining behavior to sync with team work, Team building activities.

Email etiquette: Before you start typing: what to send by email, "What I'm trying to say": creating an accurate subject line It's still business writing: 12 common errors to avoid, before clicking „send“: checking, proofing and copying, Damage control: Rx for bad email moments.

06 Hours

Module – II

Time Management: Assessing time management strengths and weaknesses, Removing the barriers of productivity Overcoming the procrastination habit Focusing and staying in the zone Learning to be present: the power of now Managing tasks, projects, goals and Ideas Determining and managing priorities.

06 Hours

Module – III

Stress Management: Achieving work-life balance by becoming better at stress management, approaching stress management in a scientific manner, enhancing personal effectiveness through managing stress, learning stress management techniques, Responding resourcefully to stress situations.

Goal Setting: Developing a mission statement, creating goal, establishing specific, measurable, achievable, realistic and time-targeted (S.M.A.R.T) goals, constructing action Steps, Making

06 Hours

Module – IV

Business Etiquettes: Importance of Business Etiquettes, Difference between Social and Business Etiquettes, Types of Business Etiquettes – Dining, Telephone, Office, Meeting, Dressing, Cubicle and Networking an action plan presentation.

Leadership Skills: What is Leadership? Leaders V/s Followers, Managers V/s Leaders, Testing your Leadership Potential, Your Personality – Conduit of Leadership, Team Leadership, Leadership & Conflict Resolution, Assertiveness and Leadership.

06 Hours

Module – V

SWOT: Understanding SWOT, SWOT analysis, Understand the concept behind SWOT analysis, Understand the value of SWOT analysis on an individual, successfully perform a SWOT analysis.

Individual Presentations: Individual presentations by the Participants, Presentations would be followed by question & answer sessions, Extensive feedback would be given by the trainer on the strengths & areas of improvement, Review of performance when compared with previous semesters, Action plan for improvement for each individual student.

06 Hours

Course Outcomes:

On completion of this course, the students will be able to:

C01: Communicate properly with team members and act as an icebreaker, encourage team participants to come together.

C02: Reach the pinnacle of success quickly and stay firm at the top for a longer duration and increase an individual's productivity

C03: Identify, describe and practice research-based coping strategies and relaxation techniques that contribute to managing life's stress

C04: Enhance the relationships in business and workplace

C05: Identify one's strengths and opportunities as a stepping stone to finding ways of optimizing them to better your market chances.

5th Semest er

SOFTWARE ENGINEERING

Course Code	L:T:P:S	Credits	Exam marks	Exam Duration	Course Type
19CST51	3:0:0:0	3	CIE:50 SEE:50	3 hours	PCC

Course Objectives:

This course will enable students to,

- Software process models and compare their applicability
- Identify the key activities in managing a software project
- Concepts of requirements engineering and Analysis Modelling
- Apply systematic procedure for software design and deployment
- Compare and contrast the various testing and maintenance

Syllabus

Module – I

Software Process and Project Management: The evolving role of software – the changing nature of software-Lifecycle models-Waterfall-Incremental-Spiral-Evolutionary-Prototyping-Concurrent development – Specialized process models - Verification - Validation - Life cycle process - Development process - System engineering hierarchy - Introduction to CMM - Level of CMM.

08 Hours

Module – II

Requirement Analysis and Specifications: Functional and Non-Functional - User - System - Requirement Engineering Process - Feasibility Studies –communication practices-Requirements - Elicitation - Validation and management - Fundamental of requirement analysis – Analysis principles- Structured System Analysis - Software prototyping - Prototyping in the Software Process - Data - Functional and Behavioral Models - Structured Analysis and Data Dictionary.

08 Hours

Module – III

Software Design: Design process - Modular design - Design heuristic - Design model and document - Architectural design - Software architecture - Data design - Architecture data - Transform and transaction mapping - User interface design - User interface design principles.

08 Hours

Module – IV

Testing and Implementation: Levels-Software Testing Fundamentals-Types of software testing-Whitebox testing-Basis path testing-Blackbox testing-Control Structure testing-Regression testing strategies-Strategic approach and issues-UNIT testing-Integration testing-Validation testing-System testing and debugging. Case studies - Writing black box and white box testing-Coding Practices Refactoring.

08 Hours

Module – V

Project Management and Estimation: Software cost estimation - COCOMO model - Quality management - Quality concepts- SQA - Software reviews - Formal technical reviews - Formal

NCET Scheme and Syllabus III to VIII Semesters 2019-20

approaches of SQA and software reliability -Software maintenance - SCM - Need for SCM
–Version control - Introduction to SCM process - Software configuration items. Re-Engineering
– Softwarereengineering - Reverse engineering - Restructuring-Forwardengineering.

08Hours

Course Outcomes:

On completion of this course, the students will be able to,

C01: Identify and apply software lifecycle model for a given problem and will know the criteria for each level ofCMM

C02: Comprehend types of requirements and summarize Requirement EngineeringProcess

C03: Design data, functional and behavioural model for any givensoftware requirement

C04: Identifyandanalyzelevelsoftestingandperformwhiteboxtestingandblackboxtestingfora givenproblem

C05: Describe concepts of software quality assurance and softwareconfiguration management

ADVANCED JAVA (IC)

Course Code	L:T:P:S	Credits	Exam marks	Exam Duration	Course Type
19CSI52	3:0:2:0	4	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to:

- Learn String handling techniques of JAVA programming.
- Learn the concepts of Collection Frameworks through Collection class and Collection interface.
- Gain knowledge of Collection algorithms and Legacy classes and interfaces.
- Understand the file concepts and Streams in JAVA programming.
- Acquire knowledge of JAVA Database Connectivity.

Syllabus

Module – I

String Handling and Wrapper classes: The String Constructors, String Length, Special String Operations, Character Extraction, String Comparison, Searching Strings, Modifying a String, Data Conversion Using valueOf(), Changing the Case of Characters Within a String, Additional String Methods, String Buffer, String Builder, PrimitiveTypeWrappers.

08Hours

Module – II

Collections Framework-1: Collections Overview, Recent changes to Collections, The Collection Interfaces, TheCollectionClasses, AccessingaCollectionviaanIterator, StoringUser-DefinedClasses in Collections, The RandomAccessInterface.

08 Hours

Module – III

Collections Framework-2: Working with Maps, Comparators, the Collection Algorithms, Why Generic Collections, The Legacy Classes and Interfaces, Parting Thoughts on Collections.

08 Hours

Module – IV

Files I/O: Files, The Closeable and Flushable Interfaces, The Stream Classes, The Byte Streams, The Character Streams, The Console Class, UsingStreamI/O.

08 Hours

Module – V

JDBC: The Concept of JDBC; JDBC Driver Types; JDBC Packages; A Brief Overview of the JDBC process; Database Connection; Associating the JDBC/ODBC Bridge with the Database; Statement Objects; Result Set; Transaction Processing; Metadata, Datatypes, Exceptions.

08 Hours

List of Lab Experiments:

- 1) Write a Java program to use String/Wrapper class and its methods.
- 2) Write a Java program to implement interface through Collection.
- 3) Write a Java program to access a collection through an iterator.
- 4) Write a Java program to print word count of a file using StreamI/O.

NCET Scheme and Syllabus III to VIII Semesters 2019-20

- 5) Write a Java program to execute select query using JDBC.
- 6) Write a Java program to update customer information.

Course Outcomes:

On completion of this course, the students will be able to:

C01: Implement String handling techniques in Java programming effectively.

C02: Access Collection class and Collection interface for Java programming.

C03: Interpret Collection algorithms and use Legacy classes and interfaces.

C04: Interpret concepts of Input/Output Streams in Files.

C05: Implement the concepts of connectivity of Database through JDBC

COMPUTER NETWORKS(IC)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI53	3:0:2:0	4	CIE:50 SEE:100	3 hours	PCC

Course Objectives:

This course will enable students to:

- Understand the basics of data flow, network categories, models and different types of switched networks used in communication.
- Know different types of error detection and correction techniques and also, error control protocols applied in the data link layer.
- Compare the design, working and implementation of Internet protocols as well as routing protocols responsible for network layer communication.
- Gain knowledge about TCP, UDP protocols and also, network security concepts.
- Learn the use of various application layer protocols.

Syllabus

Module – I

Introduction, Network Models & Switching:

Data Communications, Networks, Network Types. Network Models: TCP/IP Protocol Suite, The OSI Model Switching: Circuit-Switched Networks, Packet Switching.

08hours

Module-II

Error Detection and Correction & Data Link Control(DLC):

Error Detection and Correction: Introduction, Block Coding, Cyclic Codes, Checksum, Forward Error Correction. Data Link Control: DLC Services, Data-Link Layer Protocols, HDLC, PPP (Framing, Transition phases only).

08hours

Module – III

Network Layer Protocols & Routing: Network Layer Protocols: IPv4 addressing, Internet Protocol (IP), Mobile IP. Routing: Introduction, Routing Algorithms, Unicast Routing Protocols. Next Generation IP: IPv6 addressing, IPv6 protocol.

08hours

Module – IV

Transport and End-to-End protocols: User Datagram Protocols (UDP), Transmission Control Protocol (TCP), TCP Congestion Control. Overview of Network Security: Symmetric-Key Cryptography, Public-Key Cryptography.

08hours

Module – V

Applications, Network Security: Overview of the Application Layer, Domain Name System (DNS), Electronic Mail (E-Mail), World Wide Web (WWW), Remote Login Protocols, File Transfer and FTP.

08hours

NCET Scheme and Syllabus III to VIII Semesters 2019-20

Course Outcomes

On completion of this course, the students will be able to:

- C01:** Establish appropriate switched networks based on the network models and use them for communication.
- C02:** Resolve errors that occur during communication and also, to analyze DLC protocols.
- C03:** Assign/map internet (logical) addresses to PDUs as well as, they can implement different routing algorithms
- C04:** Implement network applications choosing either TCP or UDP depending on the requirements and also, can integrate security measures for the applications
- C05:** Use application-level protocols in the current technology trends.

DATA WAREHOUSING & DATA MINING(IC)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI54	3:0:2:0	4	CIE:50 SEE:50	3 hours	PCC

Course Objectives:

This course will enable students to,

- Identify the scope and necessity of Data Mining and Warehousing for the society
- Describe various Data Models and Design Methodologies of Data Warehousing destined to solve the root problems
- Understand various Tools of Data Mining and their Techniques to solve the real time problems
- Learn how to analyze the data, identify the problems, and choose the relevant algorithms to apply.
- Assess the Pros and Cons of various algorithms and analyze their behavior on real datasets

Syllabus

Module – I

Data Mining: Introduction - Steps in KDD - System Architecture – Types of data - Data mining functionalities - Classification of data mining systems - Integration of a data mining system with a data warehouse - Issues - Data Preprocessing - Data Mining Application.

08 Hours

Module – II

Data Warehousing: Data warehousing components - Building a data warehouse - Multi Dimensional Data Model - OLAP Operation in the Multi- Dimensional Model - Three Tier Data Warehouse Architecture - Schemas for Multi-dimensional data Model - Online Analytical Processing (OLAP) - OLAP Vs OLTP Integrated OLAP and OLAP Architecture.

08 Hours

Module – III

Association Rule Mining: Mining frequent patterns - Associations and correlations - Mining methods Finding Frequent itemset using Candidate Generation - Generating Association Rules from Frequent Item sets - Mining Frequent itemset without Candidate Generation Mining various kinds of association rules - Mining Multi-Level Association Rule-Mining Multidimensional Association Rule- Mining Correlation analysis - Constraint based association mining.

08 Hours

Module – IV

Classification and Prediction: Classification and prediction - Issues Regarding Classification and Prediction - Classification by Decision Tree Induction - Bayesian classification – Bayes' Theorem - Naïve Bayesian Classification - Bayesian Belief Network - Rule based classification - Classification by Back propagation - Support vector machines - Prediction-Linear Regression.

08 Hours

Module – V

Clustering, Applications and Trends In Data Mining: Cluster analysis - Types of data in Cluster Analysis- Categorization of major clustering methods - Partitioning methods-Hierarchical methods - Density-based methods - Grid-based methods - Model based

NCET Scheme and Syllabus III to VIII Semesters 2019-20

clustering methods -Constraint Based cluster analysis - Outlier analysis - Social Impacts of Data Mining- Case Studies: Mining WWW- Mining Text Database- Mining Spatial Databases.

08Hours

Course Outcomes:

On completion of this course, the students will be able to,

C01: Assess Raw Input Data and process it to provide suitable input for a range of data mining algorithm

C02: Design and Modelling of Data Warehouse

C03: Discover interesting pattern from large amount of data

C04: Design and Deploy appropriate Classification Techniques

C05: Able to cluster high dimensional data

ARTIFICIAL INTELLIGENCE

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST551	3:0:0:0	3	CIE:50 SEE:50	3 hours	PEC

Course Objectives:

This course will enable students to:

- Understand AI technique to a given concrete problem
- Study non-trivial AI techniques to handle complex problem
- Understand uncertainty and Problem-solving techniques.
- Learn various symbolic knowledge representations to specify domains and reasoning tasks of a situated software agent.
- Gain knowledge on logical systems for inference over formal domain

Syllabus

Module-I

Introduction: What is AI? Intelligent Agents: Agents and environment; Rationality; the nature of environment; the structure of agents. Problem solving: Problem-solving agents; Example problems; Searching for solution; Uninformed search strategies.

08 Hours

Module-II

Informed Search, Exploration, Constraint Satisfaction, Adversarial Search: Informed search strategies; Heuristic functions; On-line search agents and unknown environment. Constraint satisfaction problems; Backtracking search for CSPs. Adversarial search: Games; Optimal decisions in games; Alpha-Beta pruning.

08 Hours

Module-III

Logical Agents: Knowledge-based agents; The wumpus world as an example world; Logic; propositional logic Reasoning patterns in propositional logic; Effective propositional inference; Agents based on propositional logic.

08 Hours

Module-IV

First-Order Logic, Inference in First-Order Logic-1: Representation revisited; Syntax and semantics of first-order logic; Using first-order logic; Knowledge engineering in first-order logic. Propositional versus first-order inference; Unification and lifting

08 Hours

Module-V

Inference in First-Order Logic-2: Forward chaining; backward chaining; Resolution.

08 Hours

Course Outcomes:

On completion of this course, students will be able to:

C01: Design intelligent agents for solving simple gaming problems.

C02: Apply non-trivial AI techniques to handle complex problems.

C03: Apply various symbolic knowledge representation to specific problems.

C04: Design Knowledge-based agents.

C05: Describe syntax and semantics of first-order logic.

Text Books :

IMAGE PROCESSING

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST552	3:0:0:0	3	CIE:50 SEE:50	3 Hours	PEC

Course Objectives:

This course will enable the students to:

- Study the fundamental concepts of a digital image processing system.
- Understand spatial domain for image enhancement.
- Gain the knowledge of image filtering in frequency domain.
- Learn the noise models and restoration concepts.
- Expose to color image processing and different transformation techniques.

Syllabus

Module – I

Introduction: Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Sampling and Quantization, Representing Digital Images (Data structure), Some Basic Relationships Between Pixels- Neighbors and Connectivity of pixels in image, Applications of Image Processing: Medical imaging, Robot vision, Character recognition, Remote Sensing.

08 hours

Module – II

Image Enhancement in The Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods.

08 hours

Module – III

Image Enhancement in Frequency Domain: Introduction, Fourier Transform, Discrete Fourier Transform (DFT), properties of DFT, Discrete Cosine Transform (DCT), Image filtering in frequency domain.

08 hours

Module – IV

Image Restoration: Image enhancement versus Image restoration, Image degradation/restoration model, Inverse filter, Noise models, Restoration using spatial filtering: Arithmetic Mean filters, Geometric mean filters, Harmonic mean filters, Order Statistics filters: Median filter, Max & min filters, Midpoint filter, Adaptive filters, Wiener filter, Constrained Least squares filter.

08 hours

Module – V

Color Image Processing: Fundamentals of color image processing, Color models, Conversion of color models from one form to other form, Pseudocolor image processing, Full color image Processing, Color Image Quantization, Histogram of color Image. Basic Image Transforms: Discrete Cosine and Sine transform, Z-transform, Fourier transform, Laplacian transform, Two-dimensional orthogonal unitary transforms, Properties of Unitary Transforms, K-L Transform, Introduction to Wavelet Transform.

08 hours

Course Outcomes:

After studying this course, students will be able to

C01: Review the fundamental concepts of a digital image processing system.

C02: Apply spatial domain for image enhancement.

C03: Develop frequency domain for image enhancement

C04: Use various noise models and apply appropriate filtering techniques.

C05: Perform colour image processing and various transformations on images.

Text Books:

SOFT COMPUTING

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST553	3:0:0:0	3	CIE:50 SEE:50	3 Hours	PEC

Course Objectives:

This course will enable students to:

- Learn the basic concepts of soft computing techniques and their roles in building intelligent machines.
- Understand how to apply a neural network for a particular problem.
- Gain the knowledge of fuzzy logic in solving engineering problems.
- Study the various computational methods.
- Acquire the knowledge of genetic algorithm.

Syllabus

Module – I

Introduction: What is Soft Computing? Difference between Hard and Soft computing, Requirement of Soft computing, Major Areas of Soft Computing, Applications of Soft Computing.

Neural Networks-1(Introduction & Architecture) Neuron, Nerve structure and synapse, Artificial Neuron and its model, activation functions, Neural network architecture: single layer and multilayer feed forward networks, recurrent networks.

08 Hours

Module – II

Neural Networks-1(Introduction & Architecture): Various learning techniques; perception and convergence rule, Auto-associative and hetero-associative memory.

Neural Networks-II (Back propagation networks) Architecture: perceptron model, solution, single layer artificial neural network, multilayer perceptron model; back propagation learning methods, effect of learning rule coefficient; back propagation algorithm, factors affecting back propagation training, applications.

08 Hours

Module – III

Fuzzy Logic-I (Introduction): Basic concepts of fuzzy logic, Fuzzy sets and Crisp sets, Fuzzy set theory and operations, Properties of fuzzy sets, Fuzzy and Crisp relations, Fuzzy to Crisp conversion.

08Hours

Module – IV

Fuzzy Logic -II (Fuzzy Membership, Rules): Membership functions, interference in fuzzy logic, fuzzy if-then rules, Fuzzy implications and Fuzzy algorithms, Fuzzifications & Defuzzification's, Fuzzy Controller, Industrial applications.

08 Hours

Module – V

Genetic Algorithm(GA): Basic concepts, working principle, procedures of GA, flow chart of GA, Genetic representations, (encoding) Initialization and selection, Genetic operators, Mutation, Generational Cycle, applications.

Course Outcomes

On completion of this course, the students will be able to:

C01: Describe soft computing techniques and their roles in building intelligent machines.

C02: Apply soft computing methodology for a particular problem.

C03: Deploy fuzzy logic and reasoning to handle uncertainty and solve engineering problems.

C04: Use various soft computing approaches for a given problem.

C05: Develop genetic algorithms to combinatorial optimization problems.

ACCOUNTANCY & TAXATION

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSH56	3:0:0:0	3	CIE: 50 SEE: 50	03	HSMC

Course Objectives:

- To develop greater insight into the importance of Accounting and accounting terms
- To make the students capable of recording business transaction under double entry system.
- To introduce the students about financial statements
- To facilitate a clear perspective of Indian taxation system in terms of various types of taxes prevailing in India
- To help students to understand the concepts of tax management through deductions & exemptions available under Income tax act.

Syllabus

Module – I

Introduction to accounting –Introduction: History and Development of Accounting –Meaning Objectives and functions of Accounting-Book-keeping V/s Accounting –Users of accounting data systems of bookkeeping and accounting – branches of accounting –advantages and limitations of accounting. Accounting Concepts and conventions: Meaning need and classification, accounting standards –meaning, need and classification of Indian accounting standards. Accounting principles V/s accounting standards, Classification of accounting transaction and accounts, rules of debit and credit as per Double Entry System.

08 hours

Module – II

Accounting Process: Journalizing and Ledger position, Preparation of different subsidiary books: Purchase Day Book, Sales Day Book, Purchase Returns Day Books, Sales Returns Day Book, Cash Book. Bank Reconciliation Statement: Meaning, Need, Definition, reason of differences between cash book & pass book, Preparation of Trial Balance: Rectification of errors (Concept only)

08 hours

Module – III

Preparation of Final Statement: Meaning and objectives of financial statements, Preparation of Income statement & Balance sheet. (Sole proprietor)

08 hours

Module – IV

Introduction to Tax: Definition of Tax, Types of Tax, Assessment year, Previous year, Person, Assessee, Residential Status & Tax Liability, Canons of taxation, Heads of income, Gross Total Income Exempted Income u/s. 10, Tax slabs for Individual, PAN card, (Problems on residential Status of Individual Assessed and Incidence of Tax).

08 hours

Module – V

Computation of Tax Liability: Heads of Income (Concepts only)- Income from salary, Income

NCET Scheme and Syllabus III to VIII Semesters 2019-20

from house property, Income from Business & Profession, Capital Gains, Income from other Sources, Gross Total Income Deductions U/s 80 C-80 U, Set Off & Carry Forward of Losses (Concepts only), Computation of Total Income and Determination of Tax Liability.

08 hours

Practical Components:

- 1) Analyzing financial statement of various business organizations and comparing the accounting methods used.
- 2) Using online Income tax calculator to assess income of various individuals on the basis of different tax slabs.
- 3) Collecting Form-16 & statement of return of Income in terms of salaried individual.

Course Outcomes:

Students will be able to:

- C01:** Understand basic accounting principles & standards and analyze business transaction as per double entry system of bookkeeping
- C02:** Acquire the ability to understand the importance of maintaining various subsidiary books
- C03:** Evaluate the Financial statements in terms of Profitability & financial position of Business
- C04:** Classify incomes in terms of different heads of income under Income tax act
- C05:** Interpret the various provision and exemptions of direct Tax Act relating to computation of Gross Total Income and Assess income and compute tax liability in terms of an individual taxpayer.

Text Book:

- 1) T.S. Grewal: Accountancy, Sultan Chand & Sons(P) Ltd., New Delhi, Latest Edition
- 2) 7 Author series: Fundamental of Accounting, Vision Publishing House, Bangalore, Latest Edition

Reference Books:

- 1) Singhania & Singhania: Taxman's Direct taxes-law & practice, Taxman Publications; New Delhi, 63rd edition
- 2) S.N. Maheshwari: Management Accounting and Financial Control, Sultan Chand & Sons(P) Ltd., New Delhi, Latest Edition
- 3) R.L. Gupta: Advanced Accountancy, Sultan Chand & Sons(P) Ltd., New Delhi, Latest Edition

EMPLOYABILITY SKILLS AND APTITUDE DEVELOPMENT

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSH58	1:0:2:0	2	CIE:50 SEE:50	3 Hours	P&T

Course Objectives:

This course will enable students to:

- Understand different types of Numerical / Arithmetical problems.
- Understand the different Data interpretation problems.
- To enhance interpersonal and soft skills for professional development.
- Enables students to develop their ability to reason by introducing them to elements of formal reasoning.
- To develop Problem Solving, confidence building, organizational, team working skills.

Syllabus

Module – I

Quantitative Aptitude I: Number System, Ratio Proportion and Partnership, Average.

06Hours

Module – II

Quantitative Aptitude II: Percentage, Profit and Loss, Time and Work

06Hours

Module – III

Logical Reasoning - I: Number Series, Letter Series, Blood Relations

04Hours

Module – IV

Logical Reasoning - II: Analogy, Seating Arrangement, Data Arrangement

04Hours

Module – V

Verbal Ability: Comprehension, Sentence Correction, Sentence Completion.

05 Hours

6th Semest er

CLOUD COMPUTING (IC)

Course Code	L : T : P : S	Credits	Exam Marks	Exam Duration	Course Type
19CSI61	3 : 0 : 2 : 0	4	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to

- Identify the Cloud infrastructure components and service management processes
- Explain the fundamentals of cloud computing
- Gain the knowledge about virtualization and its techniques.
- Illustrate the cloud application programming and Aneka platform
- Differentiate Various cloud platforms used in industry

Prerequisite: Computer Networks, Database Management System, Operating system

Syllabus

Module – I

Introduction: Cloud Computing at a Glance, The Vision of Cloud Computing, Defining a Cloud, A Closer Look, Cloud Computing Reference Model, Characteristics and Benefits, Challenges Ahead, Historical Developments, Distributed Systems, Virtualization, Web 2.0, Service-Oriented Computing, Utility- Oriented Computing, Building Cloud Computing Environments, Application Development, Infrastructure and System Development, Computing Platforms and Technologies, Google AppEngine, Microsoft Azure, Hadoop, Force.com and Salesforce.com, Manjrasoft Aneka. Virtualization: Introduction, Characteristics of Virtualized, Virtualization and Cloud Computing, Pros and Cons of Virtualization

08 Hours

Module – II

Cloud Computing Architecture: Introduction, Cloud Reference Model, Architecture, Infrastructure / Hardware as a Service, Platform as a Service, Software as a Service, Types of Clouds, Public Clouds, Private Clouds, Hybrid Clouds, Community Clouds, Economics of the Cloud, Open Challenges, Cloud Definition, Cloud Interoperability and Standards Scalability and Fault Tolerance Security, Trust, and Privacy Organizational Aspects. Aneka: Cloud Application Platform, Framework Overview, Anatomy of the Aneka Container, From the Ground Up: Platform Abstraction Layer, Fabric Services, foundation Services, Application Services, Building Aneka Clouds, Infrastructure Organization, Logical Organization, Private Cloud Deployment Mode, Public Cloud Deployment Mode, Hybrid Cloud Deployment Mode, Cloud Programming and Management, Aneka SDK, Management Tools.

08 Hours

Module – III

Concurrent Computing: Thread Programming, Introducing Parallelism for Single Machine Computation, Programming Applications with Threads, What is a Thread?, Thread APIs, Multithreading with Aneka, Introducing the Thread Programming Model, Aneka Thread vs. Common Threads. High-Throughput Computing: Task Programming, Task Computing, characterizing a Task, Computing Categories, Frameworks for Task Computing, Task-based Application Models, Embarrassingly Parallel Applications, Parameter Sweep Applications, Workflow Applications with Task Dependencies.

08 Hours

Module – IV

Data Intensive Computing: Map-Reduce Programming, What is Data-Intensive Computing? Characterizing Data-Intensive Computations, Challenges Ahead, Historical Perspective, Technologies for Data-Intensive Computing, Storage Systems, Programming Platforms.

08 Hours

Module – V

Cloud Platforms in Industry: Amazon Web Services, Compute Services, Storage Services, Communication Services, Additional Services, Google AppEngine, Architecture and Core Concepts, Application Life-Cycle, Cost Model, Observations, Microsoft Azure, Azure Core Concepts, SQLAzure, Windows Azure Platform Appliance. Cloud Applications: Scientific Applications, Business and Consumer Applications, CRM and ERP, Productivity, Social Networking, Media Applications, Multiplayer Online Gaming.

08 Hours

Laboratory

List of Experiments

- 1) Installation and Configuration of Justcloud.
- 2) Working in Cloud9 to demonstrate different language.
- 3) Working and installation of Google App Engine.
- 4) Working and installation of Microsoft AZURE.
- 5) Working with Mangrasoft Aneka Software.
- 6) Create an application (Ex: Word Count) using Hadoop Map/Reduce

Course Outcomes

On completion of this course, the students will be able to:

C01: Explain cloud computing, classify services of cloud computing

C02: Illustrate architecture and programming in cloud

C03: Demonstrate data intensive computing.

C04: Apply cloud computing services to commercial systems for deploying cloud

C05: Analyzing different Cloud platform in industry and their applications

Text Books:

ANDROID APPLICATION DEVELOPMENT(IC)

Course Code	L : T : P : S	Credits	Exam Marks	Exam Duration	Course Type
19CSI62	3 : 0 : 2 : 0	4	CIE:50 SEE:50	3 Hours	PCC

Course Objectives: This course will enable students to:

- Outline the Android SDK features and the Development Framework and understanding Activities.
- Learn adaptive, responsive user interfaces that work across a wide range of devices.
- Identify background work and long-running tasks in Android applications
- Describe the concepts of Storing, sharing and retrieving data in Android applications
- Learn permissions, security and performance affect applications.

Prerequisite: Basic Knowledge of JAVA Programming and XML (Extension Markup Language)

Syllabus

Module- I

Basics of Android

What Is Android? Android Versions, Features of Android, Architecture of Android, Android Devices in the Market, The Android Market, Obtaining the Required Tools, Eclipse, Android SDK, Android Development Tools (ADT), Creating Android Virtual Devices (AVDs), Creating Your First Android Application, Anatomy of an Android Application. Understanding Activities, Applying Styles and Themes to Activity, Hiding the Activity Title, Displaying a Dialog Window, Displaying a Progress Dialog, Linking Activities Using Intents, Resolving Intent Filter Collision, Returning Results from an Intent .

08 Hours

Module- II

Components of Screen, Views and Layouts

Understanding the Components of a Screen, Views and View Groups, Linear Layout, Absolute Layout, Table Layout, Relative Layout, Frame Layout, Scroll View, Adapting to Display Orientation, Anchoring Views, Resizing and Repositioning, Managing Changes to Screen Orientation, Persisting State Information during Changes in Configuration, Detecting Orientation Changes, Controlling the Orientation of the Activity, Creating the User Interface Programmatically, Basic Views.

08 Hours

Module- III

Image Views, Preferences () and Storage

Using Image Views to Display Pictures - Gallery and Image View Views, Image Switcher, Grid View, Using Menus with Views - Creating the Helper Methods, Options Menu, Context Menu, Saving and Loading User Preferences - Using get Shared Preferences(), Using get Preferences(), Persisting Data to Files - Saving to Internal Storage, Saving to External Storage (SD Card), Choosing the Best Storage Option, Using Static Resources, Creating and Using Databases.

08 Hours

Module- IV

Content Provider, SMS Messaging

NCET Scheme and Syllabus III to VIII Semesters 2019-20

Sharing Data in Android, Using a Content Provider - Predefined Query String Constants, Projections, Filtering, Sorting, Creating Your Own Content Providers - Using the Content Provider. SMS Messaging - Sending SMS Messages Programmatically, Getting Feedback after Sending the Message, Sending SMS Messages Using Intent, Receiving SMS Messages, Updating an Activity from a Broadcast Receiver, Invoking an Activity from a Broadcast Receiver.

08 Hours

Module- V

Services, Activities and Publishing APK Files.

Creating Your Own Services - Performing Long-Running Tasks in a Service, Performing Repeated Tasks in a Service, Executing Asynchronous Tasks on, Separate Threads Using Intent Service, Communicating between a Service and an Activity, Binding Activities to Services. Preparing for Publishing, Versioning, Digitally Signing Your Android Applications, Deploying APK Files - Using the adb.exe Tool, using a Web Server, Publishing on the Android Market, Creating a Developer Profile, Submitting Your Apps.

08 Hours

List of Experiments

Programs supplement the lecture concepts will be based on the latest version of Android SDK.

PART-A

- 1) Develop an android app which displays “Hello World” message
- 2) Using Android, Create a login Activity. It asks “username” and “password” from user. If username and password are valid, it displays Welcome message using new activity
- 3) Create Implicit Intents
- 4) “Happy Birth Day” App using TextView and ImageView
- 5) Set and retrieve shared preferences

PART-B

- 1) Develop an android app which displays a form to get following information from user. 1) Username 2) Password 3) Email Address 4) Phone Number 5) Country Form should be followed by a Button with label “Submit”. When user clicks the button, a message should be displayed to user describing the information entered. Utilize suitable UI controls (i.e. widgets). [When user enters country in Auto Complete TextView, list of states should be displayed in Spinner automatically]
- 2) The Simple Calculator app has two edit texts and four buttons. When you enter two numbers and click a button, the app performs the calculation for that button and displays the result.
- 3) Develop an android app for Text to Speech.
- 4) Create the MP3 player like application with service

Course Outcomes:

On completion of this course, students will be able to:

C01:Comprehend the basic features of Android Platform and Create Activities in Android.

C02:Demonstrate the design concepts of user interface using components and views in Android.

C03:Create and use databases for Android Application.

C04:Implement messaging services in Android.

C05:Deploy mobile applications in various market place for distribution

Text Books:

BIG DATA ANALYTICS

Course Code	L : T : P : S	Credits	Exam Marks	Exam Duration	Course Type
19CST63	3 : 0 : 0 : 0	3	CIE: 50 SEE: 50	3 hours	PCC

Course Objectives:

This course will enable students to

- Understand Big – Data, Hadoop Distributed File system and MapReduce.
- Explore Hadoop tools and manage Hadoop Administration.
- Appraise the role of Business intelligence and its applications across industries.
- Assess core data mining techniques for data analytics.
- Learn various Text Mining techniques.

Prerequisite:

Good knowledge skill on Database and Data Structures

Syllabus**Module – I**

Introduction To Big Data: Big Data and its importance, Four Vs, Big data applications. IntroductionTo Hadoop: Hadoop Distributed File System Basics, Hadoop components, Hadoop Eco-System,Hadoop MapReduce Framework.

08 Hours

Module – II

Essential Hadoop Tools – Yarn, Hive, Oozie, Pig, Flume, Hadoop YARN Applications, Managing Hadoop with Apache Ambari, Basic Hadoop Administration Procedures.

08 Hours

Module – III

Business Intelligence Concepts and Application – BI – Tools, Skills, Applications, Data Warehousing – Approaches and Architecture, Data Mining – CRISP – DM, Techniques, Tools, Myths, Mistakes, Data Visualization – Types of charts.

08 Hours

Module – IV

Decision Trees- Pseudo code, Regression – Logistic, Advantages and Disadvantages, Artificial Neural Networks – Design principles, Steps in developing ANN, Advantages and Disadvantages, Cluster Analysis - K-means algorithm, Association Rule Mining - Apriori algorithm.

08 Hours

Module – V

Text Mining – Architecture, TDM, Applications, Naïve-Bayes Analysis - Model, Advantages and Disadvantages, Support Vector Machines - Model, Advantages and Disadvantages, Web Mining – Content, Structure, Usage, Social Network Analysis - Techniques and Algorithm, Page Rank, Practical Considerations.

08 Hours

Course Outcomes

On completion of this course, the students are able to:

NCET Scheme and Syllabus III to VIII Semesters 2019-20

C01: Master the concepts of Big Data, HDFS and MapReduce framework

C02: Investigate Hadoop related tools for Big Data Analytics and perform basic Hadoop Administration

C03: Recognize the role of Business Intelligence, Data warehousing and Visualization in decision making

C04: Demonstrate the importance of core data mining techniques for data analytics

C05: Illustrate and analyze Text Mining Techniques

Text Books:

- 1) Douglas Eadline, "Hadoop 2 Quick-Start Guide: Learn the Essentials of Big Data Computing in the Apache Hadoop 2 Ecosystem", 1st Edition, Pearson Education, 2016. ISBN-13: 978-9332570351
- 2) Anil Maheshwari, "Data Analytics", 1st Edition, McGraw Hill Education, 2017. ISBN-13: 978-9352604180

FULL STACK DEVELOPMENT (IC)

Course Code	L : T : P : S	Credits	Exam Marks	Exam Duration	Course Type
19CSI64	3 : 0 : 2 : 0	4	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to,

- Use HTML, CSS and JavaScript in web pagedesign.
- Access the DOM objects, filters, forms inJavaScript's query.
- WriteprogramsusingHooks, components and Events in ReactJS.
- Create basic web applications with Node.js, Express JS.
- Understand with the database connectivity and reactive forms using JavaScript's

Prerequisite: Basic knowledge of programming and JAVA Programming.

Syllabus

Module – I

JavaScript: Basics: Variables, Operator, DOM, Arrays, Functions, Arrow Functions, Classes, Objects, Event Handling, Map, Babel JS, React Introduction, React Installation.Simple React programs and CSS styling.

08 Hours

Module – II

React JS: Functional Component, Class Component, Event Based Component, Props, States, setState, Event Handling, Binding Event Handler, Life Cycle Methods, Lists& Keys, Forms and user inputs, Rendering:Conditional Rendering, List Rendering.

08 Hours

Module – III

Hooks: useState, useMenu, useEffect,Axios Package, useRef, useContext, useReducer,useCallback useInput, React Router, APIs, Practical React: icons, video player, credit card, model, chart, count up.

08 Hours

Module – IV

Introduction to Node.js: What is Node.js?, Features of Node.js, Setup Development Environment- Installing,Node.js, Working with REPL, Node.js Console, Node.js Module, Node Package Manager, Node.jsBasics,FileSystem,HTTPandHTTPs,CreatingWebServer-Handlinghttprequest,Node.js Callbacks,Node.jsEvents.

08 Hours

Module – V

Database Connectivity and Reactive Forms: Promises, Express.js, Database Connectivity – Connecting to RDBMS and NoSQL database, Performing CRUD operations, What is Reactive Forms, Syncing of HTML and Form, Form Control Arrays, Relative Forms, Value changes and Reacting to status, Create Reactive form through code, Adding Validation, Adding Validation, Grouping, Custom Validators.

08Hours

Laboratory Component: List of Programs

1. Write a ReactJS Program

using useState hook.

2. Write a ReactJS Program to style a web page using CSS.

3. Write a ReactJS Program to fetch details from spotifyAPI.

4. Write a ReactJS Program to implementing routing using react-router-dom package.

5. Write a ReactJS Program to implement digital clock using hook.

6. Write a ReactJS program create login form.

7. Write a ReactJS program create a simple greeting website.

Course Outcomes:

On completion of this course, the students will be able to,

C01:Develop programs in HTML, JavaScript.

C02:Design programs using ReactJS components.

C03:Test and deploy web pages using React Hooks .

C04:Develop programs in Node JS, Express JS.

C05:Design programs using React JS with databaseconnectivity.

CYBERSECURITY AND FORENSIC

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST651	3:0:0:0	3	CIE:50SEE:100	3 hours	PE

Course Objectives: 40 hrs

This course will enable students to,

1. Realize the fundamental concepts of cybersecurity and to get awareness of cyber-attack.
2. Create insight on cybercrime and offenses in digital world
3. Get knowledge on Cyber forensic techniques and procedures
4. Learn Cyber Defense and Analysis Techniques

Syllabus

Module-I

Cyber Security: Network and Security Concepts, Information Assurance Fundamentals, Basic Cryptography, Symmetric Encryption, Public Key Encryption, RSA, the Domain Name System (DNS), Firewalls.

08 Hours

Module- II

Cyber Attack: Attacker Techniques and Motivations, different Types of attacks, Anti-forensics, Fraud Techniques, code, Threat Infrastructure. Malicious Code: Self-Replicating Malicious Code, Stealing Information and Exploitation, Form Grabbing, , Browser Helper Objects.

08 Hours

Module- III

Cyber Crime: Introduction, Cybercrime: Definition and Origins of the Word, who are Cybercriminals? Classification of Cybercrimes. Cyber offenses: How Criminals Plan them? Introduction, Categories of Cyber-crime, how Criminals Plan the Attacks, Social Engineering.

08 Hours

Module – V

Cyber Forensic: Understanding Computer Forensics, Introduction to Historical background of Cyberforensics, Digital Forensics Science, The Need for Computer Forensics, Cyberforensics and Digital Evidence, Forensics Analysis of E-mail, Digital Forensics Life Cycle.

Cyber Defense and Analysis: Defense and Analysis Techniques, Memory Forensics, Honeypots, Malicious Code Naming, Automated Malicious Code Analysis Systems, Intrusion Detection Systems, Case studies, Demonstration of forensic software and tool.

08 Hours

On completion of this course, the students will be able to,

1. Analyze and resolve security issues in networks and computer systems to secure an IT infrastructure.
2. Diagnose and investigate cyber-attacks related to computer systems and digital world.
3. Analyze and compare various types of cybercrime to Interpret and forensically investigate security incidents.
4. To deploy cyber defense techniques and can analyze the system for better forensic solutions.

INFORMATION & NETWORK SECURITY

Course Code	L : T : P : S	Credits	Exam Marks	Exam Duration	Course Type
19CST652	3 : 0 : 0 : 0	3	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

As a student will be able to learn:

- Acquire the knowledge of basic concepts of cryptography and network security and classify attacks on a network.
- Understand and analyze the different process for hiding the information with conventional cryptographic algorithms.
- Comprehend various block cipher cryptosystems.
- Learn the concepts of public cryptosystems and key management Systems.
- Understand and apply authentication techniques to provide secure communication.

Prerequisites:

Students should have the knowledge of Computer Networks, Mathematics and Algorithm Concepts.

Syllabus

Module – I

Introduction: Service mechanisms and attacks, The OSI security architecture, A Model for Network Security. **Symmetric Ciphers:** Symmetric cipher model, substitution techniques.

08 Hours

Module – II

Symmetric Ciphers: Transposition techniques, Steganography. **Block Ciphers and DES:** Simplified DES. Block cipher principles, DES, Strength of DES, Block cipher design principles.

08 Hours

Module – III

Advanced Encryption Standard - AES Transformation Function: Cipher-Substitute Bytes Transformation, Shift Row Transformation, Mix Column Transformation, Add Round Key Transformation, AES key expansion. Block cipher modes of operation.

08 Hours

Module – IV

Asymmetric Ciphers - Public key cryptography and RSA: Principles of public key cryptosystems, RSA algorithm. **Other public key cryptosystems and key management:** Key management, Diffie-Hellman key exchange. Elliptic Curve Cryptography.

08 Hours

Module – V

Network Security Applications - Authentication Applications: X.509 Authentication Service, Kerberos. **Electronic Mail Security:** PGP.

08 Hours

Course Outcomes:

At the end of this course, students will be able to

C01:Describe the basic concepts of cryptography and network security and classify attacks on a network, symmetric ciphers and substitution techniques.

C02:Apply and integrate the different process for hiding the information with conventional cryptographic algorithms, transposition techniques and block ciphers.

C03:Illustrate the various block cipher cryptosystems like DES and AES.

C04:Analyze public cryptosystems and key management systems

C05:Demonstrate and analyze authentication techniques to provide secure communication.

Textbooks:

- 1) Cryptography and Network Security: William Stallings, Pearson Education, 2003
- 2) Behrouz A Forouzan, Debdeep Mukhopadhyay: Cryptography and Network Security, 2nd Edition, Special Indian edition, Tata McGraw-Hill, 2011.

Reference Books:

- 1) Cryptography and Network Security, Atul Kahate, TMH, 2003

Reference Online Resources:

- 1) <https://nptel.ac.in/course.php>

BLOCKCHAIN & CRYPTO

Course Code	L : T : P : S	Credits	Exam Marks	Exam Duration	Course Type
19CST653	3 : 0 : 0 : 0	3	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to:

- Understand about Symmetric and Asymmetric Encryption, block chain and Bit coin concepts
- Analyze the Working of Block Chain System.
- Design, build, and deploy smart contracts and distributed applications
- Evaluate security, privacy, and efficiency of a given block chain system.
- Cognize about 'digital' currency, Storage and Currency Exchange Services.

Prerequisite: Network Security and Information Security.

Syllabus

Module – I

Introduction to Block chain: Back story of Block chain, what is Block chain? Centralized vs. Decentralized Systems, Layers of Block chain, why is Block chain Important? Limitations of Centralized Systems, Block chain Adoption So Far, Block chain Uses and Use Cases How Block chain Works: Laying the Block chain Foundation, Cryptography, Symmetric Key Cryptography, Cryptographic Hash Functions.

08 Hours

Module – II

Cryptography and Transactions: Asymmetric Key Cryptography, Diffie-Hellman Key Exchange, Symmetric vs. Asymmetric Key Cryptography, Merkle Trees, Putting It All Together, Properties of Block chain Solutions, Block chain Transactions, Distributed Consensus Mechanisms, Block chain Applications, Scaling Block chain, Off-Chain Computation, Sharding Block chain State.

08 Hours

Module-III

Bitcoin Works: The History of Money, Dawn of Bitcoin, What Is Bitcoin? Working with Bitcoins, The Bitcoin Blockchain, Block Structure, The Genesis Block, The Bitcoin Network, Network Discovery for a New Node, Bitcoin Transactions, Consensus and Block Mining, Block Propagation, Bitcoin Scripts, Bitcoin Transactions Revisited, Scripts.

08 Hours

Module – IV

Ethereum: HowEthereum works from Ethereum to Bitcoin, Ethereum as Next-Gen Block chain, Design Philosophy, Ethereum Blockchain, Ethereum Accounts and Ethereum Smart Contracts, EVM and Code Execution, Ethereum Ecosystems- Swarm, DApp.

08 Hours

Module – V

Crypto Currencies: A Simple Crypto currency, Simple Local Storage, Hot and Cold Storage, Online Wallets and Exchanges, Payment Services, Transaction Fees, Currency Exchange Markets.

08 Hours

Course Outcomes:

After the completion of this course, student will be able to

- C01:** Gain Knowledge in Symmetric Encryption, Asymmetric Encryption, Block Chain System and Crypto currencies.
- C02:** Analyze the working of Block Chain System, Ledger Transaction and Mining mechanism.
- C03:** Design and Implement Ethereum block chain contract.
- C04:** Pertain to ethical and legal usage of Block chain applications.
- C05:** Use of Bitcoins, online wallets, Currency Exchanges and payment services.

Text Books:

- 1) Bikram Aditya Singhal, Gautam Dhameja and Priyansu Sekhar Panda, "Beginning Block chain: A Beginner's Guide to Building Block chain Solutions", Apress publication, 2018.
- 2) Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller and Steven Goldfeder, "Bit coin and Crypto-currency Technologies: A Comprehensive Introduction, Princeton University Press (July 19, 2016).

Reference Books:

- 1) Mastering Bit coin by Andreas M. Antonopoulos
- 2) Block chain Technology: Crypto-currency and Applications by S. Shukla, M. Dhawan, S. Sharma, S. Venkatesan, Oxford University Press 2019.

ANIMATION & GAME DEVELOPMENT

Course Code	L : T : P : S	Credits	Exam Marks	Exam Duration	Course Type
19CST661	3 : 0 : 0 : 0	3	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

- Understand the basics of animation and game theory
- Demonstrate the principles of animations and operations
- Explain 2D animation techniques
- Describing and Solving Game theory problems
- Demonstrate applications of the Game Designs

Pre-requisite: Fine art or Graphic arts and Ability to use Animation and video editing software.

Syllabus

Module- I

Basics of Animations- Development: Idea Creation, Evolving a Storyline.**Character Design:** The Evolution of 2D Character Design, The Evolution of 3D Character Design, Animation Style, Concept and Environment Design. **Project Financing:** Animation Markets, Scheduling and Budgeting, Investment, Marketing, and Distribution Possibilities.

08 hours

Module – II

Principles of Animation: Key Poses, Breakdowns, and In between, Timing, Extreme Positions, Arcs and Paths of Action, Holds, Emphasis, Anticipation, Weight and Weighted Movement, Flexibility and Fluid Joint Movement, Overlapping Action, Generic Walks, Walk Cycles, Runs and Run Cycles, Silhouetting, Dialogue and Lip Sync, Laughter, Takes, Eyes and Expressions.

08 hours

Module – III

2D Animation Overview: It's All about Pencils and Paper Script, The Tools of the Trade.**2D Animation Basics:** Keys, In-betweens, and Timing, Dope (Exposure) Sheets and Production Folders, Flipping and Peg Bars, Using Peg Bars

08 hours

Module - IV

Introduction to Game theory:A Model of Games, The Game Half, The Player Half, The Third Half, Rules and Structure, Emotions and Feelings, Immersive, Real World to Game World, Game Systems, Probability, Graphical Interface

08 hours

Module - V

GAME PROGRAMMING: Overview, Programming Teams, Methodologies, Common Practices, Quality, Leveraging Existing Code, Platforms.

08 hours

NCET Scheme and Syllabus III to VIII Semesters 2019-20

Course Outcomes

At the end of the course the student will be able to:

C01: Understand the Basics of Animation techniques.

C02: Describe principles animation techniques.

C03: Demonstrate the functions of 2D Animation techniques.

C04: Apply game theory in real-time animated projects.

C05: Apply the models of the Game theory problems

Text Books:

- 1) Animation from Pencil to Pixels, Tony White, Classical Techniques for Digital Animators, Focal Press is an imprint of Elsevier.
- 2) Introduction to Game Development by Steve Rabin 2nd Edition.

Reference Books:

- 1) 1. Sketching for Beginners: Step-by-step Guide to Getting Started with Your Drawing
- 2) Perspective Made Easy (Dover Art Instruction)
- 3) Roger B Myerson: Game theory: Analysis of Conflict, Harvard University Press, 1997
- 4) An Introduction to Game Theory: Strategy, Joel Watson, W W Norton and Company.

DEVOPS

Course Code	L : T : P : S	Credits	Exam Marks	Exam Duration	Course Type
19CST662	3 : 0 : 0 : 0	3	CIE:50 SEE:50	3 Hours	PCC

Course objectives:

This course will enable students to:

- Understand the DevOps Concepts and DevOps Tool.
- Expose to the evolving Applications and advance features of Jenkins and Docker.
- Get Familiarize with Docker and Chef workstations.
- Understand the importance of testing using Jenkins,AWS EC2.
- Identify and understand security in Jenkins and monitor the azure Applications.

Syllabus

Module - I

Introduction to DevOps Concepts: Understanding DevOps movement,DevOps with changing times,The waterfall model, Agile Model, Why DevOps?,DevOps lifecycle, Benefits of DevOps.

08Hours

Module - II

Continuous Integration with Jenkins 2: Introduction, Installing Jenkins, Jenkins dashboard,Configuration Java, Maven/Ant in Jenkins, Creating and Configuring build job for Java application

with Maven, Managing Nodes, Email notifications based on build status.

08 Hours

Module - III

Containers: Overview of Docker containers, Understanding the difference between virtual machinesand containers, Installing and configuring Docker, Creating a Tomcat container.**Cloud Computing and Configuration Management:** An overview of the Chef configurationmanagement tool, Installing and configuring a Chef workstation, Installing knife plugins for AmazonWeb Services and Microsoft Azure.

08 Hours

Module - IV

Automated Testing (Functional and Load Testing): Functional testing using Selenium, Functionaltest execution in Jenkins, Load test execution using Jenkins.**Orchestration - End-to-End Automation:** End-to-end automation of application life cyclemanagement using Jenkins, End-to-end automation using Jenkins, Chef, and AWS EC2, End-to-endautomation using Jenkins and AWS Elastic Beanstalk, End-to end automation using Jenkins andMicrosoft Azure app services, End-to-end automation orchestration of application life cycleManagement using VSTS.

08 Hours

Module - V

Security and Monitoring: Security in Jenkins and VSTS, Security in Jenkins and VSTS, Monitoring

Jenkins and Microsoft Azure, Monitoring Jenkins, Azure Web Apps troubleshooting and monitoring,Azure App Services - CPU and memory consumption, Azure App Services - Activity log, AzureApplication Insights for application monitoring, Azure web application monitoring, Diagnostics logs.

08 Hours

Laboratory Component:

- 1) Download and install Jenkins CI on GCP.
- 2) Configuration. Change language interface and Create the first Jenkins job
- 3) Build Triggers, cron syntax, Artifacts.
- 4) Create and run Jenkins pipeline.
- 5) Create parameterized jobs in Jenkins.
- 6) Install and configure Docker.

Course outcomes:

On completion of this course, the students are able to:

- CO1:** Understand the fundamentals of DevOps engineering and be fully proficient with DevOps terminologies, concepts, benefits, and deployment options to meet your business requirements
- CO2:** Build jobs and configurations in Jenkins and Master in docker, Continuous Delivery and chef Configuration Management.
- CO3:** Create tomcat container and work on Dockers and chef workstation.
- CO4:** Analyse, design and evaluate automation scripts & systems.
- CO5:** Use Azure application services and monitor the security issues in Jenkins and Microsoft Azure.

MACHINE LEARNING

Course Code	L : T : P : S	Credits	Exam Marks	Exam Duration	Course Type
19CST663	3 : 0 : 0 : 0	3	CIE:50 SEE:50	3 Hours	PCC

Course Objectives:

This course will enable students to:

- Understand the basic concepts and techniques of Machine Learning.
- Understand decision tree algorithms and classify supervised,unsupervised and reinforcement learning algorithms.
- Learn Artificial Neural Networks with multilayer perceptron's.
- Understand algorithms for learning Bayesian networks.
- Gain knowledge on probability learning theory.

Prerequisite: Basic Knowledge of Mathematics, Computer skills with programming and learning abilities

Syllabus

Module – I

Introduction: Well-Posed Learning problems, Designing a learning system, Perspectives and issues in machine learning.

08 Hours

Module – II

Decision Tree Learning: Introduction, Decision Tree representation, Appropriate problems for decision tree learning, The basic decision tree algorithm, Hypothesis space search in decision tree algorithms, Inductive bias in decision tree learning, Issues in decision tree learning.

08 Hours

Module – III

Artificial Neural Networks: Introduction, Neural network representation, Problems for neural network learning, Perceptrons, Multiple layer networks and back propagation algorithm. An illustrative example: Face recognition.

08 Hours

Module – IV

Evaluating Hypotheses and Bayesian Learning: Motivation, Estimating hypothesis accuracy, Basics of sampling theory, Bayes theorem and concept learning, Bayes optimal classifier, Gibbs algorithm, Naïve Bayes classifier, An example: Learning classify text.

08 Hours

Module – V

Computational Learning Theory: Introduction, probably learning an approximately correct hypothesis, the mistake bound model of learning.

08 Hours

NCET Scheme and Syllabus III to VIII Semesters 2019-20

Course Outcomes (CO's):

On completion of this course, the students are able to:

CO1: Choose the learning techniques and investigate concept learning.

CO2: Identify the characteristics of decision tree and solve problems associated with Machine Learning.

CO3: Apply effectively neural networks for appropriate applications.

CO4: Apply Bayesian techniques and derive effectively learning rules.

CO5: Evaluate hypothesis and investigate instant based learning and reinforced learning.

Text Books:

- 1) Tom M Mitchell, "Machine Learning", McGraw-Hill

Reference Books:

- 1) Aaron Courville, Ian Goodfellow, and Yoshua Bengio, Deep Learning, MIT Press, 2015, ISBN: 9780262035613
- 2) Christopher Bishop, Pattern recognition and machine learning. Himalaya Publishing House ISBN: 98345789
- 3) Course material available on Swayam platform and NPTEL, for the course on Introduction to Machine Learning, conducted by Prof. Sudeshna Sarkar, IIT Kharagpur.
- 4) Ethem Alpaydın, Introduction to Machine Learning, MIT press 4th edition ISBN: 9780262043793.
- 5) C Agarwal, Machine Learning for Text, Pearson Education - 2006 (2 & 4). ISBN - 15:34519801.

7th Semest er

UML & AGILE PRACTICES

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI711	3:0:2:0	4	CIE:50 SEE:50	3 Hours	PEC - IV

Course Objectives:

This course will enable students to:

- Understand the basic concepts of Object Orientation and UML.
- Get a clear understanding of how to use UML and design diagrams.
- Know iterative, incremental and development process.
- Study the principles and practices of extreme programming.
- Understand the essence of agile development methods and develop prototyping in the software process.

Syllabus

Module – I

UML Diagrams: What is Object Orientation? What is OO development? OO themes; Evidence for usefulness of OO development; OO modelling history. UML diagrams – Use Case – Class Diagrams– Interaction Diagrams – State Diagrams – Activity Diagrams – Package, component and Deployment Diagrams.

08 Hours

Module – II

Advanced Modelling and Design: System sequence diagrams - Relationship between sequence diagrams and use cases Logical architecture and UML package diagram – Logical architecture refinement - UML class diagrams derived data; Packages; Practical tips. State Modelling, Advanced: Events, States, Transitions and Conditions; State diagrams; State diagram behaviour nested states signal generalization concurrency; Relation of class and state models.

08 Hours

Module – III

The Agile Movement - A Five Minute Primer, What is Agile Development? The Agile Methodologies Agile Values, Agile Practices, Agile Principles. **Agile Characteristics**-The Characteristics of an Agile Project, The Development Team Project Management, The Customer, Processes and Tools The Contract, What Projects Can Benefit from Agile Development.

08 Hours

Module – IV

The Agile Methodologies: Common Themes, Methodology Descriptions, Extreme Programming, Scrum, Feature Driven Development, The Crystal Methodologies, Adaptive Software Development, Dynamic Systems Development Method, Lean Software Development, Starting Monday: Investigate Further. **Selecting an Approach that Fits:** Choosing between an Agile or Traditional Approach, Selecting the Right Agile Approach.

08 Hours

Module – V

Agile Practices and Testing: Getting Started, Agile Practices Explained, Selecting the Next Practice, Rejecting a Practice, Adopt Practices before Tools Learn Programming Practices in Pairs, Agile Practices in this Book Agile Practices Explained, Why these Practices were Chosen, An Agile Approach to Testing, The Good Enough Approach Testing as the Best Défense.

08 Hours

Course Outcomes

On completion of this course, the students will be able to:

C01:Use the basic concepts of object orientation, analyze and design object-oriented system using UML.

C02:Describe the advanced UML analysis and design diagrams.

C03:Apply the common characteristics of an agile development process.

C04:Analyze agile software development process models and plan driven process models.

C05:Determine software project characteristics that would be suitable for an agile process

Text Books:

- 1) Craig Larman, "Applying UML and Patterns: An Introduction to Object-Oriented Analysis and Design and Iterative Development", Third Edition, Pearson Education, 2005.(module 1 and 2), ISBN-13: 9781584509876
- 2) Michael Blaha, James Rumbaugh: Object-Oriented Modeling and Design with UML, 2nd Edition, Pearson Education, 2005. (module 1 and 2), ISBN-13:9781584509876

INTERNET OF THINGS

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI712	3:0:2:0	4	CIE:50 SEE:50	3 Hours	PEC - IV

Course Objectives:

This course will enable the students to:

- Gain the knowledge about IOT concepts.
- Know different Application protocols for IOT.
- Understand methods of deploying smart objects and connect them to network.
- Know the diverse methods of deploying smart objects and connect them to network.
- Learn about genesis and impact of IOT applications

Syllabus

Module – I

Introduction to Internet of Things: Definition and Characteristics of IOT, Physical Design of IOT – IOT Protocols, IOT communication models, IOT Communication APIs IOT enabled Technologies – Wireless Sensor Networks, Cloud Computing, Big data analytics, Communication protocols, Embedded Systems, IOT Levels and Templates. Overview of Microprocessor and Microcontroller, Basics of Sensors and actuators.

08 Hours

Module – II

Prototyping IoT Objects Using Microprocessor/Microcontroller: Working principles of sensors and actuators – Setting up the board - Programming for IOT – Reading from Sensors, Communication: Connecting microcontroller with mobile devices – communication through Bluetooth, Wi-Fi, Ethernet, Zigbee, RFID, NFC.

08 Hours

Module – III

IOT Architecture and Protocols: Architecture Reference Model- Introduction, Reference Model and architecture, IOT reference Model. Protocols- 6LowPAN, RPL, CoAP, MQTT.

08 Hours

Module – IV

Smart Objects: The “Things” in IOT, Sensors, Actuators, and Smart Objects, Sensor Networks, Connecting Smart Objects, Communications Criteria.

08 Hours

Module – V

Cloud Services For IOT: Introduction to Cloud Storage models and communication APIs Webserver – Web server for IOT, Cloud for IOT, Python web application framework designing a RESTful web API, Amazon Web services for IOT.

08 hours

Course Outcomes:

After studying this course, students will be able to

C01: Analyze IOT architectural components.

C02: Interfacing Sensor and Actuator with Arduino development board.

C03: Describe protocols of resource constraint network.

C04: Compare and contrast the deployment of smart objects and the technologies to connect them to network.

C05: Design and develop IOT applications.

Text Books:

Advanced Cloud Computing (Amazon Web Services)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI713	3:0:2:0	4	CIE:50 SEE:50	3 hours	PEC - IV

Course Objectives:

This course will enable students to:

- Identify the security and compliance benefits of by using the AWS Cloud.
- Understand the access control and management features of AWS.
- Learn about data encryption methods to secure all types of sensitive data.
- Get knowledge about the important steps for managing various AWS resources.
- Study the AWS services to protect network security.

Syllabus

Module-I

Introduction to AWS: AWS history, AWS Infrastructure, AWS services, AWS ecosystem
Programming, management console and storage on AWS: Basic Understanding APIs - AWS programming interfaces, Web services, AWS URL naming, Matching interfaces and services, Elastic block store - Simple storage service(S3), Glacier - Content delivery platforms.

08 Hours

Module-II

AWS identity services, security and compliance: Users, groups, and roles - Understanding credentials, Security policies, IAM abilities and limitations, AWS physical security - AWS compliance initiatives, Understanding public/private keys, Other AWS security capabilities.

08 Hours

Module-III

AWS computing and marketplace: Elastic cloud compute (EC2) - Introduction to servers, Imaging computers, Auto scaling, elastic load balancing, cataloging the marketplace, AMIs, Selling on the marketplace. **AWS networking and databases:** Virtual private clouds, Cloud models, Private DNS servers (Route 53), Relational database service – DynamoDB, ElastiCache, Redshift.

08 Hours

Module-IV

Other AWS services and management services: Analytics services, Application services, Cloud security, CloudWatch, CloudFormation, CloudTrail, OpsWorks. **Configuration management:** Introduction.

08 Hours

Module-V

AWS billing and Dealing with disaster: Managing costs, Utilization and tracking, Bottom line impact, Geographic and other concerns, Failure plans, Examining logs.

08 Hours

Course Outcomes

On completion of this course, the students will be able to:

- CO1:** Discuss system virtualization and outline its role in enabling the cloud computing system model.
- CO2:** Illustrate the fundamental concepts of cloud storage and demonstrate their use in storage systems such as Amazon S3 and HDFS.
- CO3:** Design various management and other distinguish services of AWS.
- CO4:** Develop security and compliances for AWS.
- CO5:** Analyze the billing of resources and other paradigm: how to deal with disasters.

STORAGE AREA NETWORK

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST721	3 : 0 : 0 : 0	3	CIE : 50 SEE : 50	3 Hours	PEC - V

Course Objectives

This course will enable students to:

- Understand the fundamentals of Storage Area Networks.
- Understand the metrics used for designing storage area networks.
- Understand RAID concepts.
- Understand the various storage technologies like NAS, SAN.
- Enable the students to understand how data centres' maintain data with the concepts of backup.

Syllabus

Module – I

Introduction: Server Centric IT Architecture and its Limitations, Storage-Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks, The Data Storage and Data Access problem, The Battle for size and access. Intelligent Disk Subsystems: Architecture of Intelligent Disk Subsystems, Hard disks and Internal I/O Channels, JBOD, Storage virtualization using RAID and different RAID levels, Caching, Acceleration of Hard Disk Access, Intelligent disk subsystems, Availability of disk subsystems.

08 Hours

Module – II

I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. Network Attached Storage: The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system. File System and NAS: Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS.

08 Hours

Module – III

Storage Virtualization: Definition of Storage virtualization; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network.

08 Hours

Module – IV

SAN Architecture and Hardware devices: Overview, creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective. **Software Components of SAN:** The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

08 Hours

Module – V

Management: System Management, Requirement of Management System, Support by Management System Management Interface, Standardized Mechanisms, Property Mechanisms, In-band Management, Use of SNMP, CIM and WBEM, Storage Management Initiative Specification(SMI-I), CMIP and DMI, Optional Aspects of the Management of Storage Networks, Summary.

Course outcomes:

On completion of this course, the students are able to:

CO1: Identify the need for performance evaluation and the metrics used for it.

CO2: Apply the techniques used for data maintenance.

CO3: Realize storage virtualization concept

CO4: Develop techniques for policies for LUN masking, file systems

CO5: Analyze System management.

Text Book:

- 1) Ulf Troppens, Rainer Erkens and Wolfgang Muller: Storage Networks Explained, Wiley India, 2013. ISBN: 9780-470-741-346
- 2) Robert Spalding: "Storage Networks - The Complete Reference", Tata McGraw-Hill, 2011 ISBN: 8580-780-651-643

Reference Books:

- 1) Marc Farley: Storage Networking Fundamentals – An Introduction to Storage devices, Subsystems, Applications, Management, and File Systems, Cisco Press, 2005.
- 2) Richard Barker and Paul Massiglia: "Storage Area Network Essentials A Complete Guide to understanding and Implementing SANs", Wiley India, 2006.

AD-HOC NETWORKS

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST722	3:0:0:0	3	CIE:50 SEE:50	3 hours	PEC - V

Course objectives:

This course will enable students to:

- Learn the mathematical models and network protocol designs in wireless multihop-networks.
- Understand exposition of network protocols and their cross-layer interactions.
- Learn the active research areas in wireless multihop networks.
- Gain knowledge on network protocols.
- Understand the importance of network security.

Syllabus

Module – I

Introduction Ad-hoc Networks: Introduction, Issues in Ad hoc wireless networks, Ad hoc wireless internet.

08 Hours

Module – II

MAC Protocols for Ad hoc wireless Networks: Introduction, Issues in designing a MAC protocol for Ad hoc wireless Networks, Design goals of a MAC protocol for Ad hoc wireless Networks, Classification of MAC protocols, Contention based protocols with reservation mechanisms.

08 Hours

Module – III

Routing -Routing protocols for Ad hoc wireless Networks: Introduction, Issues in designing a routing protocol for Ad hoc wireless Networks, Classification of routing protocols, Table drive routing protocol, On-demand routing protocol. Hybrid routing protocol, routing protocols with effective flooding mechanisms.

08 Hours

Module – IV

Transport layer protocols for Ad hoc wireless Networks: Introduction, Issues in designing a transport layer protocol for Ad hoc wireless Networks, Design goals of a transport layer protocol for Ad hoc wireless Networks, Classification of transport layer solutions, TCP over Ad hoc wireless Networks, Other transport layer protocols for Ad hoc wireless Networks.

08 Hours

Module – V

Security: Security in wireless Ad hoc wireless Networks, Network security requirements, Issues & challenges in security provisioning, Network security attacks, Key management, Secure routing in Ad hoc wireless Networks.

08 Hours

Course Outcomes:

At the end of the course the student will be able to:

C01: Design their own wireless network.

C02: Evaluate the existing network and improve its quality of service.

C03: Choose appropriate protocol for various applications.

NCET Scheme and Syllabus III to VIII Semesters 2019-20

CO4: Examine security measures present at different level.

CO5: Analyze energy consumption and management.

Text Book:

- 1) C Shiva Rama Murthy and B. S Manoj: Ad Hoc Wireless networks, 2nd Edition, Pearson Education, 2005. ISBN 0-13-147023-X.
- 2) Jyoti Prakash Singh, Paramartha Dutta, Amlan Chakrabarti; Ad Hoc Networks: A Statistical Perspective Hardcover Springer; 1st ed. 2018 edition (13 April 2018) –ISBN-13: 978-9811087691.

Reference Book:

MANAGEMENT INFORMATION SYSTEM (MIS)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST723	3:0:0:0	3	CIE:50 SEE:50	3 hours	PEC - V

Course objectives:

This course will enable students to:

- Understand the role of Information Technology and Strategies to manage system implementation process.
- Analyze the principles of Transaction Processing Systems.
- Evaluate the roles of various types of Information system in business environment and Customer relationship and supply chain management system.
- Understand the trends and issues in e-commerce Applications.
- Effectively communicate strategic alternatives to facilitate decision making.

Syllabus

Module – I

Foundations of information systems in business: Information Systems in Business: Introduction, The real world of Information Systems, Networks, What you need to know, the fundamental role of IS in business, Trends in IS, Managerial challenges of IT. **System Concepts:** Components of an Information System, Information System Resources and activities, Recognizing Information Systems.

08 Hours

Module – II

Fundamentals of strategic advantages: Competitive strategy concepts, Strategic uses of IT, Building a customer-focused business, Reengineering in business processes, Becoming an agile company creating a virtual company, Building a knowledge-creating company. **Enterprise Business Systems:** Introduction, Cross-functional enterprise applications, Enterprise application integration, Transaction processing systems, Enterprise collaboration systems. Functional Business Systems: Introduction, Marketing systems, Manufacturing systems, Human resource systems, Accounting systems, financial management systems.

08 Hours

Module – III

Customer relationship management: Introduction, What is CRM? The three phases of CRM, Benefits and challenges of CRM, Trends in CRM Enterprise resource planning: Introduction, What is ERP? Benefits and challenges of ERP, Trends in ERP. Supply chain Management: Introduction, What is SCM? The role of SCM, Benefits and challenges of SCM, Trends in SCM.

08 Hours

Module – IV

Electronic commerce fundamentals: Introduction, The scope of ecommerce, Essential e-commerce, processes, Electronic payment processes. e-Commerce applications and issues: E-commerce application trends, Business-to- Consumer e-commerce, Web store requirements, Business-to- Business e-commerce, e-commerce marketplaces, Clicks and bricks in ecommerce.

08 Hours

Module – V

Decision support in business: Introduction, Decision support trends, Decision support systems (DSS), Management Information Systems, Online analytical processing, Knowledge management systems.

08 Hours

Course outcomes:

On completion of this course, the students are able to:

CO1:Describe the role of information technology and information systems in business

CO2:Analyze and synthesize business information and systems to facilitate evaluation of strategicalternatives.

CO3:Apply a framework and process for aligning organization's IT objectives with businessstrategy.

CO4:Analyze the various solutions for business Applications.

CO5:Understand the leadership role of Management Information Systems in achieving businesscompetitive advantage through informed decision making.

ROBOTICS

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI731	3:0:2:0	4	CIE:50 SEE:50	3 hours	PEC - VI

Course objectives:

This course will enable students to:

- Understand the basics of robotics & its simulation.
- Study working of actuators & encoders.
- Learn ability to use software tools for working with sensors.
- Exposed to Robot Operating System.
- Acquire the knowledge of automation in various sources.

Syllabus

Module – I

BASICS OF ROBOTICS: History – Definition – Components – Building a robot – The Robot drive mechanism. **ROBOT SIMULATION:** Mathematical modelling of the robot - Robot kinematics - Concepts of ROS and Gazebo.

08 Hours

Module – II

DESIGNING CHEFBOT HARDWARE: Specifications - Block diagram - Working with Robotic Actuators and Wheel Encoders - Interfacing DC geared motor with Tiva C Launch Pad - Interfacing quadrature encoder with Tiva C Launch pad - Working with Dynamixel actuators.

08 Hours

Module – III

WORKING WITH ROBOTIC SENSORS: Working with ultrasonic distance sensors - Working with the IR proximity sensor - Working with Inertial Measurement Unit.

08 Hours

Module – IV

PYTHON AND ROS: Introduction to OpenCV, OpenNI, and PCL - Programming Kinect with Python using ROS, OpenCV, and OpenNI - Working with Point Clouds using Kinect, ROS, OpenNI, and PCL.

08 Hours

Module – V

INTERFACING IT INTO ROS, USING PYTHON: Building ChefBot hardware - Writing a ROS Python driver for ChefBot - Understanding ChefBot ROS launch files - Working with ChefBot Python nodes and launch files - The Calibration and Testing of ChefBot - The Calibration of Xbox Kinect using ROS - Wheel odometry calibration - Testing of the robot using GUI.

08 Hours

Course Outcomes:

On completion of this course, the students are able to:

NCET Scheme and Syllabus III to VIII Semesters 2019-20

C01: Explain the concept of robotics & simulating it.

C02: Develop simple robot models.

C03: Deploy various sensors for effective use.

C04: Use Robot Operating system effectively.

C05: Demonstrate some simple robotic applications.

Text Books:

- 1) Lentin Joseph, "Learning Robotics using Python", PACKT Publishing, 2015, ISBN: 978-1783287536.
- 2) Aaron Martinez and Enrique Fernandez, "Learning ROS for Robotics Programmin", PACKTPublishing, 2013, ISBN: 9781782161455.

Reference Books:

ADVANCED ALGORITHMS

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI732	3:0:2:0	4	CIE:50 SEE:50	3 hours	PEC - VI

Course Objectives:

This course will enable students to:

- Learn the different amortized analysis.
- Know the modular arithmetic for solving problems.
- Explore the knowledge of different graph algorithms.
- Understand familiarity with major algorithms and data structures.
- Synthesize efficient algorithms in common engineering design situations.

Syllabus

Module – I

Analysis Techniques: Growth functions, Recurrences and solution of recurrence equations; Amortized analysis: Aggregate, Accounting, and Potential methods, String Matching Algorithms: Naïve Algorithm; Robin-Karp Algorithm, String matching with Finite Automata, Knuth-Morris-Pratt and Boyer-Moore Algorithms.

08 Hours

Module – II

Number Theoretic Algorithms: Elementary notions, GCD, Modular arithmetic, solving modular linear equations, The Chinese remainder theorem, Powers of an element RSA Cryptosystem, primality testing, Integer factorization, - Huffman Codes, Polynomials. FFT-Huffman codes: Concepts, construction, Proof correctness of Huffman's algorithm; Representation of polynomials.

08 Hours

Module – III

DFT and FFT efficient implementation of FFT, Graph Algorithms, Bellman-Ford Algorithm Shortest paths in a DAG, Johnson's Algorithm for sparse graphs, Flow networks and the Ford-Fulkerson Algorithm, Maximum bipartite matching.

08 Hours

Module – IV

Computational Geometry-I: Geometric data structures using, C, Vectors, Points, Polygons, Edges Geometric objects in space; Finding the intersection of a line and a triangle, Finding star-shaped polygons using incremental insertion.

08 Hours

Module – V

Computational Geometry-II: Clipping: Cyrus-Beck and Sutherland-Hodman Algorithms; Triangulating, monotonic polygons; Convex hulls, Gift wrapping and Graham Scan; Removing hidden surfaces.

08 Hours

Course Outcomes

After studying this course, students will be able to

C01: Explain the principles of algorithms analysis approaches.

C02: Apply different theoretic based strategies to solve problems.

C03: Illustrate the complex signals and data flow in networks with usage of tools.

C04: Compare between different data structures algorithms.

C05: Describe the computational geometry criteria.

PATTERN RECOGNITION AND ANOMALY DETECTION

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CSI733	3:0:2:0	4	CIE:50 SEE:50	3 hours	PEC - VI

Course Objectives:

This course will enable students to:

- Understand the mathematical morphology necessary for Pattern recognition.
- Introduce the student to various Pattern recognition techniques.
- Learn the Representation and description and feature extraction.
- Comprehend various anomaly detection approaches
- Cognize real world problems and applications related to pattern recognition & anomaly detection

Syllabus

Module – I

Introduction to Pattern Recognition and Anomaly Detection: Definition of PR, Applications, Datasets for PR, Different paradigms for PR, Introduction to probability, events, random variables, Joint distributions and densities, moments. Estimation minimum risk estimators, problems.

08 Hours

Module – II

Statistical Approaches for Pattern Recognition: Data structures for PR, Representation of clusters, proximity measures, size of patterns, Abstraction of Data set, Feature extraction, Feature selection, Evaluation.

08 Hours

Module – III

Machine Learning Approaches for Pattern Recognition: Nearest neighbour algorithm, variants of NN algorithms use of NN for transaction databases, efficient algorithms, Data reduction, prototype selection, Bayes theorem, minimum error rate classifier, estimation of probabilities, estimation of probabilities, comparison with NNC, Naive Bayes classifier, Bayesian belief network.

08 Hours

Module – IV

Anomaly Detection & Anomaly Detection Approaches: The different aspects of anomalies, Classification-based approaches, **Unsupervised Approaches:** Clustering, Nearest-neighbour, other statistical techniques, **Non-Standard Approaches:** Information-theoretic methods, Spectral techniques.

08 Hours

Module– V

Real-world problems: Network intrusion detection: Types of cyber-attacks on networks, Network Anomaly Detection techniques, Anomaly Detection in BIG DATA: The nature of big data, Key challenges, relevant technologies, relevant approaches and examples.

08 Hours

Course Outcomes:

On completion of this course, the students are able to:

CO1: Illustrate pattern recognition fundamentals

CO2: Explain the advantages and disadvantages of various statistical methods for pattern recognition

NCET Scheme and Syllabus III to VIII Semesters 2019-20

C03:Determine how to apply a supervised learning algorithm to a classification problem for anomaly detection

C04:Explain the limitations of supervised learning for anomaly detection

C05:Practice applying the various techniques to different problems in different domains

Text Books:

- 1) Pattern Recognition (An Introduction), V Susheela Devi, M Narsimha Murthy, Universities Press, ISBN 978-81-7371-725-3, 2011.
- 2) Pattern Recognition & Image Analysis, Earl Gose, Richard Johnson Baugh, Steve Jost. PHI ISBN-81-203-1484-0, 1996.
- 3) Statistical Pattern Recognition Second Edition, Andrew R. Webb QinetiQ Ltd., Malvern, UK, ISBN 0-470-84513-9, ISBN 0-470-84514-7.
- 4) Anomaly Detection Principles and Algorithms, Kishan G. Mehrotra, Chilukuri Mohan, Huaming Huang, Springer International Publishing, 2017, ISBN 978-3-319-67526-8

Pattern Recognition Lab

Implement the programs on the following:

- 1) Feature Representation
- 2) Mean and Covariance
- 3) Linear Perceptron Learning
- 4) Generation of Random Variables
- 5) Bayesian Classification
- 6) MLE: Learning the classifier from data
- 7) Data Clustering: K-Means, MST-based

DECISION SUPPORT SYSTEMS (DSS)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST741	3:0:0:0	3	CIE:50 SEE:50	3 hours	IE - I

Course objectives:

This course will enable students to:

- Identify among data processing systems, management information systems, and decision support/ expert systems
- Learn decision rules based on knowledge provided by an acknowledged expert and codify those rules as assertions, rules, and ad hoc procedures
- Outline the major components of Decision Support Systems (DSS)
- Learn how information is used to solve problems
- Utilize commercial spreadsheet and database integrated packages to develop
- Simulation models to support the decision-making process.

Syllabus

Module – I

Introduction to Decision Support Systems (DSS): Different types of Managerial Decision Problems and the Role of a DSS in solving them. Management Information System versus DSS, Range of Capabilities of a DSS, Components of a DSS, Examples of DSS, Basics of DSS Design Cycle.

08 Hours

Module – II

Models in Decision Support Systems: What is a Model? Classification of Models, Purpose of Modelling in DSS, Solution Techniques: Optimization, Heuristics, and Simulation, Traditional approach to modelling and its weaknesses, Desirable features for Models in DSS, Models and Managers: The Concept of a Decision Calculus’.

08 Hours

Module – III

Decision Support in Business: Introduction, Decision Support Trends, Management Information Systems, Online Analytical Processing, Using Decision Support Systems, Executive Information Systems, Enterprise Portals and Decision Support, Knowledge Management Systems.

08 Hours

Module – IV

Data and Dialog Management Systems: Database, Sources of Data, Data Directory, Data Structure and Database Languages, Query Facility, Data Management System, DBMS as DSS Development Tool. User Interface, Graphics, Multimedia, Visual Interactive Modelling Natural Language Processing.

08 Hours

Module -V

Development and Applications of DSS: Development process, Software and Hardware and Data Acquisition, Model Acquisition, Dialog Development, Evaluation of Investment Proposals, Forecasting Demand for Independent Items, Determination of Product Mix, Vehicle Scheduling, Customer Centric Value Driven Decisions, Pricing Decisions.

08 Hours

Course outcomes:

On completion of this course, the students are able to:

C01: Develop and implement DSS

C02: Describe the decision-making process, the concepts and principles of a decision support system.

C03: Identify decision support tools that can aid decision making.

C04: Apply system development methodology to develop a decision support system.

C05: Develop a functional prototype of a decision support system for a given case

Text Books

ENTERPRISE RESOURCE PLANNING (ERP)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST742	3:0:0:0	3	CIE:50 SEE:50	3 hours	IE - I

Course Objectives:

This course will enable students to:

- Know contemporary and forward-looking on the theory and practice of Enterprise Resource Planning Technology.
- Focus on a strong emphasis upon practice of theory in Applications and Practical oriented approach.
- Train to learn the basic understanding of how ERP enriches the business organizations in achieving a multidimensional growth.
- Aim at preparing technological competitive and make them ready to self-upgrade with the higher technical skills.
- Gain the knowledge of existing modules of ERP systems.

Syllabus

Module-I

Introduction to ERP: Common ERP myths, Evolution of ERP, Advantages, Characteristics, Process integration with ERP system, Implementation costs, Roadmap for successful ERP implementation.
ERP Market and Vendors: ERP market, ERP vendors, Service oriented architecture, ERP package features.

08 Hours

Module-II

Extended ERP services: Defining Extended ERP, Supply chain Management (SCM) and ERP, ERP and Business Intelligence (BI), ERP and E-commerce.
Business Process Re-engineering (BPR) and ERP: Defining BPR, BPR Vs TQM, BPR and change management, approaches in BPR implementation, Methodologies for BPR implementation, BPR success/failure factors.

08 Hours

Module-III

Planning for ERP: Planning for ERP implementation, understanding organizational requirement, Economic and strategic justification, Project scope, determining resources, organizational commitment to change, budget for ERP, select right ERP package.
Implementation of ERP: Designs of ERP system, ERP implementation approach, ERP implementation life cycle, different phases of ERP implementation.

08 Hours

Module-IV

Managing ERP projects: Risk/Failure factors in ERP implementation, Example of ERP failure, Critical success factors, Complexities of ERP projects, Evaluating ERP projects.
ERP: Going Live and post implementation: Preparing to go live, Strategies for migration to new ERP system, Managing ERP after Go Live, Maintenance of ERP system.

08 Hours

Module-V

ERP, Internet and WWW – ERP II: The internet explosion, ERP, Internet and WWW, ERP to ERP II, Best practices of ERP II.
Future directions and Trends in ERP: New markets, New channels, Easier communication tools, Business models, Need based applications, Expenditures, Reduction in implementation time, Market snapshots, Shifting revenue models.

Course Outcomes

On completion of this course, the students will be able to:

CO1: Compare the concepts and importance of ERP system.

CO2: Design ERP market and vendors.

CO3: Differentiate the relationship of ERP and SCM.

CO4: Evaluate the concept ERP implementation.

CO5: Design the concepts of internet with respect to WWW.

SUPPLY CHAIN MANAGEMENT

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST743	3:0:0:0	3	CIE:50 SEE:50	3 hours	IE - I

Course Objectives:

This course will enable students to:

- Understand differences between logistics and supply chain management.
- Understand the framework of supply chain network.
- Learn about the components of inventory management.
- Understand the tools and techniques used in logistics management.
- Learn about the professional opportunities in supply chain management.

Syllabus

Module – I

Introduction: Basic concepts & philosophy of SCM, essential features, decision phases – processview, supply chain framework, key issues in SCM and benefits.

08Hours

Module – II

Designing the supply chain network: Designing the distribution network, role of distribution, factorsinfluencing distribution, design options, distribution networks in practice, network design in the supplychain, factors affecting the network design decisions. Designing and Planning Transportation Networks,role of transportation, modes, design options, tailored transportation.

08 Hours

Module – III

Inventory Management:Concept, various costs associated with inventory, EOQ, buffer stock, lead time reduction, reorder point / re-order level fixation, ABC analysis, SDE/VED Analysis.

08 Hours

Module – IV

Inventory Management: Concept, various costs associated with inventory, EOQ, buffer stock, lead time reduction, reorder point / re-order level fixation, ABC analysis, SDE/VED Analysis.

08 Hours

Module – V

Recent issues in SCM: Role of computer/ IT in supply chain management, CRM Vs SCM,Benchmarking concept, features and implementation, outsourcing – basic concepts, value addition inSCM.

Case study:

- Students are expected to choose any 4 Indian Organizations and study their supply chain interms of drivers of the Supply chain and submit a report.
- Students should visit different logistics companies and understand the services provided bythem and submit a report.
- Students should identify the various types of IT applications employed by Indian Organizationsin their Supply chain.

08 Hours

Course Outcomes:

On completion of this course, the students are able to:

- C01:** Identify and Analyze Business Models, Business Strategies and, corresponding Competitive Advantage.
- C02:** Formulate and implement supply chain management Best Practices
- C03:** Analyze supply chain management and Logistics operations for optimum utilization of resources.
- C04:** Evaluate cases for effective supply chain management and its implementation.
- C05:** Demonstrate the risk and issues involved in supply chain management.

Text Books:

- 1) Oyle, Bardi, Langley, A Logistic approach to Supply Chain Management –1st Edition, Cengage Learning, ISBN: 9781337415750.
- 2) Donald J Bowersox, Dand J Closs, M Bixby Coluper, Supply Chain Logistics Management, 2nd Edition, TMH, 2008, ISBN 0-07- 1 1 23067.

DIGITAL MARKETING (IE)

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST751	3:0:0:0	3	CIE:50 SEE:50	3 hours	IE - II

Course Objectives:

This course will enable students to:

- Comprehend business advantages of digital marketing and its importance for marketing success and to develop a digital marketing plan.
- Learn Website and SEO optimization techniques and also, to outline Google Ad Words campaigns.
- Acquire knowledge of Google Analytics for measuring effects of digital marketing and to get insights of future trends that will affect the development of digital marketing.
- Learn to use various social media platforms in order to create, manage and evaluate digital marketing efficiently.
- Cognize strategies used for email marketing, resource planning and budgeting.

Syllabus

Module – I

Introduction to digital marketing, Digital vs. Real Marketing, Digital Marketing Channels, Creating initial digital marketing plan, Content management, SWOT analysis, Target group analysis, Web design, Optimization of Web sites.

08 Hours

Module – II

SEO Optimization, Writing the SEO content, Web design, Optimization of Web sites, Google AdWords- creating accounts, Google AdWords- types, Introduction to CRM, CRM platform, CRM models, Introduction to Web analytics, Web analytics - levels.

08 Hours

Module – III

Introduction of Social Media Marketing, Creating a Facebook page, Visual identity of a Facebook page, Types of publications, Business opportunities and Instagram options, Optimization of Instagram profiles, Integrating Instagram with a Web Site and other social networks, Keeping up with posts.

08 Hours

Module – IV

Business tools on LinkedIn, Creating campaigns on LinkedIn, Analyzing visitation on LinkedIn, Creating business accounts on YouTube, YouTube Advertising, YouTube Analytics, Facebook Ads, Creating Facebook Ads, Ads Visibility.

08 Hours

Module – V

E-mail marketing, E-mail marketing plan, E-mail marketing campaign analysis, Keeping up with conversions, Digital Marketing Budgeting- resource planning - cost estimating - cost budgeting – cost control.

08 Hours

Course Outcomes:

On completion of this course, the students are able to:

CO1: Examine the importance of digital marketing and create suitable plans for marketing success.

NCET Scheme and Syllabus III to VIII Semesters 2019-20

C02:Assess customer relationships across all digital channels and build better customer relationships.

C03:Create a digital marketing plan, starting from SWOT analysis and there by defining a targetgroup.

C04:Use social media channels to achieve maximum benefit for the business, by using webanalytics.

C05:Develop different ways for the integration of marketing plans taking into consideration theavailable resources and budget.

Text Book:

- 1) Damian Ryan & Calvin Jones, "Understanding Digital Marketing: Marketing Strategies forEngaging the Digital Generation", Kogan Page Limited, 1st Edition, 2009, ISBN-978-0749453893.

OPERATION RESEARCH

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST752	3:0:0:0	3	CIE:50 SEE:50	3 hours	IE - II

Course Objectives:

This course will enable students to:

- Learn quantitative methods and techniques for effective decision- making, model formulation and applications that are used in solving real world problems.
- Know the various techniques of OR, their applications and the relationship between a linear program and its dual.
- Learn different types of transportation and assignment models for optimization.
- Expose with techniques that are used to plan, schedule and monitor large projects such as building construction, maintenance of computer system, research and development design etc.
- Acquire knowledge on decision making techniques under conflicting situations where there are one or more opponents.

Syllabus

Module – I

Introduction, Linear Programming: Introduction: The Origins, Nature and Impact of OR; Defining the Problem and Gathering Data; Formulating a Mathematical Model; Deriving Solutions from the Model; Testing the Model; Preparing to Apply the Model; Implementation. **Linear Programming:** Prototype Example; The Linear Programming Model; Assumptions of Linear Programming; Additional Examples.

08 Hours

Module – II

The Simplex Method: The Essence of the Simplex Method; Setting Up the Simplex Method; The Algebra of the Simplex Method; The Simplex Method in Tabular Form; Tie Breaking in the Simplex Method; Adapting to Other Model Forms. **Duality Theory:** The Essence of Duality Theory; Primal-Dual Relationships; Adapting to Other Primal forms; The Dual Simplex Method.

08 Hours

Module – III

Transportation and Assignment Problems: The transportation problem, Initial Basic Feasible Solution (IBFS) by North West Corner Rule method, Matrix Minima Method, Vogel's Approximation Method. Optimal solution by Modified Distribution Method (MODI). **The Assignment problem:** A Hungarian algorithm for the assignment problem. Minimization and Maximization varieties in transportation and assignment problems.

08 Hours

Module – IV

Project Management with PERT/CPM: A Prototype Example- The Reliable Construction Co. Project; Using a Network to Visually Display a Project; Scheduling a Project with PERT/CPM; Dealing with Uncertain Activity Durations; Considering Time-Cost Trade-Offs; Scheduling and Controlling Project Costs; An Evaluation of PERT/CPM.

08 Hours

Module – V

Game Theory, Decision Analysis: Game Theory: The Formulation of Two-Person, Zero-Sum Games; Solving Simple Games--A Prototype Example; Games with Mixed Strategies; Graphical Solution Procedure; Solving by Linear Programming; Extensions. **Decision Analysis:** A Prototype Example; Decision Making without Experimentation; Decision Making with Experimentation; Decision Trees.

08 Hours

Course Outcomes:

On completion of this course, the students will be able to:

- C01:** Develop Linear Programming models, interpret the models, solutions and infer solutions to thereal-world problems.
- C02:** Explain optimization techniques for various problems.
- C03:** Understand the given problem as transportation and assignment problem and solve.
- C04:** Construct network diagrams and determine critical path, floats for deterministic and PERT networks including crashing of Networks.
- C05:** Illustrate game theory for decision support system

Text Books:

- 1) Frederick S. Hillier, Gerald J. Lieberman, Bodhibrata Nag, Preetam Basu: "Introduction to Operations Research", 9th Edition, Tata McGraw Hill, 2013, ISBN-13: 9780071333467.

MANAGEMENT & ENTREPRENEURSHIP

Course Code	L:T:P:S	Credits	Exam Marks	Exam Duration	Course Type
19CST753	3:0:0:0	3	CIE:50 SEE:50	3 hours	IE - II

Course Objectives:

This course will enable students to:

- Understand basics concepts in the area of management.
- Understand the role and importance of organizing and staffing
- Apply personal creativity in new venture as an entrepreneur.
- Analyze the key steps in elaboration of business idea.
- Create and analyze project with various advantages.

Syllabus

Module – I

Management and Planning: Management: Nature and Functions of Management – Importance, Definition, Management Functions, Levels of Management, Roles of Manager, Managerial Skills, Management & Administration, Management as a Science, Art & Profession. Planning: Planning-Nature, Importance, Types, Steps and Limitations of Planning; Decision Making – Meaning, Types and Steps in Decision Making.

08 Hours

Module – II

Organizing and Staffing: Organization-Meaning, Characteristics, Process of Organizing, Principles of Organizing, Span of Management (meaning and importance only), Departmentalization, Committees-Meaning, Types of Committees; Centralization Vs Decentralization of Authority and Responsibility; Staffing-Need and Importance, Recruitment and Selection Process.
